

The graph displays monthly precipitation data from 1878 to 1885. The vertical axis represents months (Jan, Feb, Mar, Apr, May, June, July, Aug, Sept, Oct, Nov, Dec) and the horizontal axis represents years. The lines show seasonal variations, with peaks often occurring in late summer or early autumn and troughs in late winter or early spring. The data for each year is plotted as a separate line, allowing for comparison of seasonal patterns over the seven-year period.
