The Puzzling Pretty Widow

*@+@+@+@+@+@+@+@+@+@+@+@ It was odd, too, that Rudolph, who had always been so fluent of speech himself, and had made her seem to dull, had now become infected with her own stupid reticence. "You are a long time finding one!" said he at last. "Yes. I-I seem to have lost all the

fine ones," replied Mabin, bending her head still lower than before over her needle-case. "Let me help you. Give me the work first, so that I can judge what size you want." "How can you tell-a man?" asked

Mabin, with indignation. And in her contempt she looked up at him again. "Oh-oh, madam! Don't you know that we sailors can use a needle as well as any woman? Here, let me show you."

This was an admirable opportunity for seating himself on the bench beside her; and Rudolph, who had felt a strange hesitation about doing so before, now took the plunge and placed himself on the end of the wooden seat. "What is this? An antimacassar?"

"No. A cooking-apron." "How uninteresting. Ladies ought not to make such things. They should do things that wants lots of bundles of silk of all sorts of colors. This isn't sufficiently decorative." You mean fancy work!" exclaimed

Mabin, with an expression of horror. "I hate fancy work!" "Girls who do fancy work can always give a fellow things they have do you think it is anything to you. by. I have a heap of tobacco pouches, to guard and keep near my heart for Now, you couldn't give a fellow a you think one must meet one's happicooking-apron to remember you by.

"I shouldn't want anybody to remember me-with a lot of other girls!" retorted Mabin, flercely. And then she felt the blood rush to her cheeks, and she thrust the needlecase quickly into his hands.

"Find one now-find one!" cried she, imperiously, "and let me see what you can do. I believe you are only boasting when you say you can sew." Rudolph took the apron from her and the needle-case, found a needle of the size he wanted in half the time she had spent in searching for one, working with fine, even.

stitches which called forth her unwilling admiration. 'Why," she cried, in great surprise,

superiority. The only thing that woman can do really well is to receive prettily the attentions of the sex; it is useless for them to try to emulate. You used to do it very well once. I am hoping you haven't lost the

"You haven't lost your old conceit, spring up. 'Oh, no. I have just the same opinion of myself, and just the same confusion. opinion of you as when you used to send me wading into the pools here. "I'd forgotten-forgotten send me wading into the pools between the rocks to get little crabs for you, and into the hedges for birds' eggs, one from each nest, don't you remember? And when you used to make me so proud by saying I found them quicker than anybody else. And then do you remember what you used

"Break them on the way home, I suppose," said she, trying to look as if she had forgotten. "Come, don't you really remember Can't you trust me?"

He had finished his nedleful of (To be Cont thread, and handed her back the apron, so that he was at leisure to watch her face as she folded the big

piece of holland and collected the odds and ends of her work-bag. And it was quite clear to him that her memory was as clear as his. "Don't you remember that you always gave me a kiss when I found a robin's nest?" 'No, indeed, I don't." But she did. Eyes, cheeks and

mouth all betrayed the scandalizing

when you grew up? Now, do you

mean to say you have forgotten Evidently loss of memory was no protection with this person. Mabin blushed and tried another sort of an-

"Yes, I remember. What funny things children say!" "Was it-funny?" "Why, yes, I can't help laughing at he idea now!" And Mabin began to laugh hysterically, unnaturally, but withall so pretily, with so much of maidenly conon and subdued happiness mingling with her amusement, that Rudolph

threw his arm around her in the midst

of her mirth, and cut it short by snatching a kiss. "Oh!" The monosyllable was meant to express astonishment and indignation, but it was a poor little protest after all, and one of which Rudolph did not feel bound to take much notice. "Are you angry?" said he, not withdrawing his arm. "Are you very angry, Mabin? Don't you think you will ever be able to

will ever be able to forgive me?" "I am angry, certainly," answered she, trying to release herself. "I hope you are going to apologize for-for forgetting that I am not nine now." "How old are you, Mabin?" "Nineteen."

"Quite old enough to take up the promises you made ten years ago. Quite old enough to marry me." "Rudolph, what nonsense!"
"Oh! is it nonsense? If you think

m going to allow my feelings to be trifled with by a chit of a girl who used to go halves with me in bull's eyes, you're very much mistaken! Now, then, are you willing to ratify your promise, or am I to bring an action for breach?" But Mabin, trembling with excitement and happiness so great as to be

bewildering, felt dimly that there was too much levity about this abrupt settlement of the affairs of two lifetimes. This sudden proposal did not accord with her serious disposition, with her sense of the fitness of things. looked at him with eyes pathetically full of something like terror.

"Rudolph!" she whispered, in a voice that was unsteady with strong emotion, "how can you talk like this? Don't you know that it hurts?" "Hurts, little one? What do you mean by that?" His tone was tender enough to sat-

isfy the most exacting damsel, but Mabin was struck with fresh terror on remarking that, instead of releasing her he tightened the grasp in which he held her. "Why, I mean-I mean that you are

in play, that it is amusement, fun. to you, while to me-" And then she saw in his eyes something new, something of the earnestness, the seriousness which she had longed for, but which she had not before detected in the light-hearted

"While to you-? Why, little one, made themselves to remember them this promise that I am to have you all very pretty and too good to use. our lives, more than it is to me? Do ness with a sour face, Mabin, and ask a girl to love you from the other side of a stone wall? Oh, my little sweetheart, with the shy eyes and the proud heart, you have a great deal to learn; and the very first thing is to trust me, and not to think my love of no account because I can woo you with a light heart." Every word seemed to echo in the

young girl's heart. She was taken off her feet, lifted high into an enchanted region where words were music, and a touch of the fingers ecstacy, and she hardly dared to speak, to move, to draw breath, lest the spell should be and took up her hem where she had broken and she should wake up to common-place life again. She listened, hardly speaking to her lover, as he told her how she had always remain-"you do it beautifully! It's better than mine!" ed in his mind as the childish figure than mine!" how her cold reserve had piqued him. "Of course it is," replied Rudolph, calmly. "Whatever the superior sex does bears, of course, the mark of given place to warmer ones when he and she became friends once more. They did not know how the went. The sun rose high, the shadows shifted gradually, the dew dried on the long grass. At last a bell, ringing loudly in the garden behind the plantation, startled Mabin, and made her

"That's for luncheon; it must be for luncheon!" she cried, in blushing Rudolph laughed gently, and picked up her bag and her work. "I won't come in," said he. "But I'll go through the plantation with you to carry these."

Across Mabin's face there came a "You must see Mrs. Dale," she said. "She will want to see you, and yet—"
"And yet what?" "I'm jealous."

"Are you? For shame, for shame! (To be Continued.)

Fishing for Health.

When a man breaks down with that dread disease, consumption, and recognizes his condition, he starts out to fish for health. He tries this thing and that thing. He consults this doctor and that doctor. He indulges in all kinds of absurd athletic exercises. He tries first one climate and then another. He tries the rest cure and the work cure. He grows steadily worse. That is the story of most consumptives. Finally, when the consumptive dies, the doctor shrugs his shoulders and pronounces consumption incurable. A thirty years' test of Dr. Pierce's Golden Medical Discovery has demonstrated that it cures of per cent. of all cases of consumption, if taken in the earlier stages of the disease, before the lungs are too far wasted. In a consumptive there is a weaker spot than even the lungs. That spot is the stomach. A consumptive never really begins to die until his stomach gives out. The "Golden Medical Discovery" not only braces up the stomach, but acts directly on the lungs, healing them and driving out all impurities. Honest medicine dealers will not urge you to take an inferior substitute. "I had a very bad cough, also night-sweats, and was almost in my grave with consumption." writes Mrs. Clara A. McIntyre, Box 171. Ashland, Middlesex Co., Mass. A friend of mine who had died with consumption came to me in a dream and told ine to take Br. Pierce's Golden Medical Discovery, and, thank the Lord, I did so. By the time I had taken half of the first bottle I felt much better. I kept on until I had taken three bottles. That was all I needed. I got well and strong again."

Whenever constipation is one of the com-

Ontario's Great Mineral Wealth

Great Activity in Mining Enterprises the Past Year.

Vast Wealth That Is Waiting for Development

Large Increase in Copper and Nickel-The Gold Output-Iron, Salt, Petroleum Galore. According to the report of the Bureau of Mines for Ontario, the first part of

which has just been issued, the mining

activity of the province in the past year has been most gratifying. The total number of locations sold and leased in the year was 1,255, embracing an area of 115,809 acres, whereas for the five years 1892-96, the number sold and leased was 1,016, with an area of 93,821 acres. The revenue derived by the crown last year from sales and rentals was \$144,299, whereas for the preceding five years it was only \$131,518. Adding the rentals of lands previously leased, the aggregate revenue of the five years was \$146,959, while for 1897 it was \$150,540, or, if the revenue from mining licenses be included, the aggregate for 1897 was \$153,-561. Equally significant was the activity shown in the incorporation of mining companies. In 1897 the number of companies incorporated was 140, | tions. with a capital stock of \$101,531,000, while during the previous 29 years only 146 companies had been incorporated, with capital amounting in the total to \$62,-

ROOM FOR DEVELOPMENT. "There is room," the report goes on, for large development in the mineral industries of the province. Not only does the varied list include all of the principal and more commonly found metals, such as iron, copper, lead, silver and gold, but it also embraces the comparatively rare metal nickel, the deposits of which in the Sudbury district constitute one of the two sources of the world's supply. In the smelt-ing of iron ore a fair beginning has been made, but the capabilities of expansion in this line has as yet been scarcely more than touched. The magnetite deposits of Eastern Ontario and the hematite and magnetite of Northwestern Ontario, taken together, are away on Sunday. more than sufficient to supply our own needs in the way of iron for perhaps centuries to come.

TWO IMPORTANT INDUSTRIES. "Among the non-metallic substances we posses the basis of two permanent and important industries in our salt beds and petroleum wells. The whole shore of Lake Huron, from the latitude of Kincardine southward, and for many miles inland, is underlaid with beds of salt hundreds of feet thick, supplying the raw material not only for refined salt itself, but for carbonate and bicarbonate of soda, soda ash, bleaching powder, and other essentials for the textile and other industries. The pertroleum industry leads all others of a mineral nature in the value of yearly output, and affords an admirable example of what enterprise and skill can do in the profitable utilization of raw material Another instance of this is seen in the cement business, which has undergone satisfactory development during the past few years. "In the products of clay-brick, tile,

terra cotta and sewer pipe-the output is limited only by the market. A new branch of the business has recently been established in the manufacture of paving brick. The use of this article for street purposes seems bound to be very extensive now that Canadian makers have shown that the product of the kilns is comparable in quality with brick from the yards of Ohio and Illinois, besides being lower in price. Natural gas is a substance which in point of value stands high in the list of Ontario's mineral products, although it is to be regretted that so much of it is taken out of the country for consumption. In almost every one of the minerals here mentioned the opportunities for the profitable investment of capital are numerous, and the vivifying touch of enterprise and capital is alone wanted to call many other indus-

tries into being." LOCATIONS IN DISTRICTS. The following table shows the number of locations sold during the year by districts, with their area and the amounts paid into the treasury as purchase money:

200,067 J 190,244 313.966 NICKEL AND COPPER. The prices of both nickel and copper have fallen almost steadily from 1892 to 1897, and these prices bear a close relationship to those of the refined metals. The average of nickel in the six years has been 11.058 cents, of copper, 3.950 cents, and of cobalt 23.760 cents, per pound in the form of matte, and in the case of each metal the cost of labor is less than one half -ranging from 42 to 44 per cent. The whole of the matte produced at the smelting works of the Sudbury district is sent out of the country to plicating causes of disease, the most perfect remedy is Dr. Pierce's Pleasant Pellets, which are always effective, yet absolutely mild and harmless. There never was any remedy invented which can take their

288,127 359,651)

same state. The cost of refining cannot be accurately stated, but it is about 91/2 cents per pound for shot or plate nickel and 6 cents for nickel oxide, while for fine copper it is about 31/2 cents per pound, or about double the labor cost of producing the matte. Computed at the present selling prices of nickel and copper in the American markets, the value of nickel and copper produced from the ores of the Sudbury mines in the past six years would be for nickel, \$8,798,125; and for copper, \$2,947,162, or a total of \$11,745,-287, but for a portion of the period the selling price of nickel has been much

higher than it is: PRODUCTION OF GOLD. The total quantity of gold ore treated in the past six years was 59,079 tons, and the total yield in bullion is valued at \$465,509, being an average of \$7.90 per ton. This appears to show that the ore is low grace, but as in the stages of development not much pains is taken to select the ore sent to the mills, it is probable that better results will be obtained when the mines are efficiently opened up. The fact that at nearly all the mines, such as the Sultana, Regina, Mikado, and Foley, the shafts and workings prove the veins to increase in width as depth is attained, encourages the hope that immense ore bodies are available, and if this is found to be the case an average of \$7 90 per ton of free-milling ore is ample for the building up of a great gold-mining industry.

Only partial returns have been collected of gold properties in process of development, and no estimate can be formed of the cost of the work done. In some cases the labor expended has reached \$8,000 to \$10,000 during the past year, and the whole amount must be large. The reports of the inspectors show that development operations have been carried on upon nearly 50 loca-

A GENERAL REVIEW. The remainder of the report, after a brief review of mining accidents and their causes, gives a very voluminous description of the mines of every kind all over the province by the several inspectors employed by the government. The reading matter is most interesting, and will be more so to the public because of a number of fine illustrations and cuts which are dispersed throughout the book. The second part of the report will be issued within a few days.
