A story of romantic quality, with that continental flavor which has been imparted to most of her stories by Mme. Elinor Glynn...

The tempestuous nature of her mother is transmitted to the child; the longing for the romantic life is an inborn passion...

People With Strange Fears.

Many people suffer from strange fears. Some quite ordinary object may inspire a usually normal person with a phobia.

These facts are known as "phobias." Perhaps the most common is the fear of the dark.

One man would always run up a side street whenever he saw a horse fall. He was inspired by the fear of something unknown.

RICH IN VITAMINES

MAKE PERFECT BREAD

Fresh Destruction.

Editor Evening Telegram.

Dear Sir--In the course of my remarks yesterday I referred to the statement by the Trade Review to the effect "every pit prop cut now would if allowed to stand attain to a diameter of from 12 to 15 in. in 20 years."

To-day I am presenting figures to show the correctness of my views, figures that were available to the Trade Review as to me...

There are exhibits of spruce and fir in the Museum, where correct information is available to all who wish to inform themselves correctly before speaking.

There is a fir specimen in the Museum with a diameter of 12 1/2 in. showing 70 rings. The tree from which this specimen was taken was, therefore, 70 years old.

The Red Spruce has a diameter of 9 1/2 in. and 130 rings. The Black Spruce has a diameter of 10 in. and about, as near as I could count, the same number of rings.

A study of those sections reveal some facts that should cause us grave concern, for they show how wrong are the wild theories of the Advocate and Trade Review writers.

It takes a fir not less than 50 years to grow from 5 to 12 inches in diameter. A Red Spruce takes about 90 years to grow from 5 to 12 inches diameter.

My quotations prove how senseless and unreliable statements can be made when the parties making them have no responsibility and no love for truth.

The matter of the preservation of our forests is too serious to be dealt with after the Squires method.

Millions of dollars worth have been ruthlessly destroyed through sawing of pit prop cutting, and it is time the people took alarm and demanded a halt.

I will be called an enemy to progress for sounding this note of warning, but let those who differ with me first meet my facts and figures before they assail me with their cries of enemy.

Let them ascertain what is the annual increment to a forest and then figure out where they are heading. If we assume an acre to yield 10 cords of wood, then it will take at least ten acres to produce by natural annual increment three cords at most.

S.S. Neptune brought a shipment of fish from Job's Southside premises yesterday, for transhipment on board S.S. Silvia.

most favorable to the apostles of exploitation. I should say that four cords is about the average to an acre...

In the face of exact information available we find writers boldly asserting that Newfoundland's forests reproduce themselves in thirty years.

Squires proposes an increased output from the Grand Falls mills together with the erection of a 400-ton mill at Deer Lake.

But what cares Squires for the future for "after him the deluge." Yours truly, ARTHUR ENGLISH.

Who Will Answer?

Editor Evening Telegram.

Dear Sir--A question was asked in last week's issue of your paper, and is still unanswered.

What steps are being taken and by whom to have this "anomaly" determined? Yours truly, DECENCY.

A Fire Sufferer.

AN APPEAL FOR ASSISTANCE.

A few days ago Mr. Henry Hutchings of Spanard's Bay met with the loss of a life savings, when a disastrous fire razed his dwelling house to the ground.

Does not this set up the fact that the German industries had been stopped by the French occupation and the famine of pig-iron in England was due to the non-production of pig-iron by the German smelters.

Let us assume the diameter of a pit prop to be 5 in. The Trade Review says this 5 in. tree if allowed to grow would in 20 years attain a diameter of 12 to 15 inches.

My figures also show that we are heading for destruction and ruin in the matter of our forests, for with the savage onslaught being made, and being contemplated we are eating into our capital at an alarming rate.

My figures also show that we are heading for destruction and ruin in the matter of our forests, for with the savage onslaught being made, and being contemplated we are eating into our capital at an alarming rate.

I will be called an enemy to progress for sounding this note of warning, but let those who differ with me first meet my facts and figures before they assail me with their cries of enemy.

Why Pretty Teeth Are shown everywhere today

Look about you. Note how many teeth now gleam. Note how people show them as they never did before.

Millions of people are brushing teeth in a new way. If you don't know the good results, make this free test.

One object is to fight the film on teeth—that viscous film you feel. It clings to teeth, enters crevices and stays. Food stains, etc., discolor it, then it forms dingy coats.

Very few people escaped such troubles under old ways of teeth cleaning.

New ways found

Then dental science found two film combatants. One acts to curdle film, one to remove it, and without any harmful scouring.

But Pepsodent brings five effects. These are very important. It multiplies the alkalinity of the saliva. That is there to constantly neutralize the acids which cause decay.

It multiplies the starch digestant in the saliva. That is there to digest starch deposits on teeth which may otherwise ferment and form acids.

Those are Nature's ever-present tooth-protecting agents. Every use of Pepsodent gives them manifold effect.

Pepsodent also polishes the teeth so film adheres less readily.

This test will be a revelation, amusing but delightful. Cut out the coupon so you won't forget.

Paderewski—The Pig Dealer.

M. Paderewski is well known as a raconteur, and is never happier than when telling a story against himself.

Apart from my music (says the great pianist) I have no hobbies, except whist, billiards, and a fancy for farm-stock.

I had just purchased some prize pigs, and the fact had been advertised widely in the papers.

After showing me his pigs, and being anxious, apparently, to sell me some, and to impress me with his importance as a breeder, he conducted me to a sty I had not seen and showed me a very fine lot of pigs.

"Do you see those?" he said confidently. "I've just sold them to Mr. Paderewski, the famous pig-dealer from abroad!"

TEMPERATURE—At the Valley Nurseries last night the thermometer registered 22 degrees of frost. This morning's reading showed 12 degrees.

First Aid

A medicine chest containing "Vaseline" preparations for the relief of accident cases, is indispensable in emergencies.

Vaseline Carbolated Petroleum Jelly

It cuts the pain out of cuts, is a valuable antiseptic, and heals quickly.

Start a Medicine Chest with a liberal supply of "Vaseline" Carbolated Jelly and the other "Vaseline" preparations shown here on the lid of the chest.
