DRIFT OF DOMESTIC TRADE.

Weekly Review of Montreal Markets.

The course of trade continues monotonously slow and disappointing. The absence of I anow at this season of the year is always bad best quality of the year and as the grubby for business, as the country customers are sever d from their base of supplies, the roads being too lough for vehicles. The transactions in general merchandise have been strictly in the requirements for immediate distribution, which, of course, mains applied to show some disposition to buy good hides. Prices are a shade easier than a week ago. We quote:—No. 1 Toronto, 9½c, and No. 2 at 9c. No. 1 Hamilton, distribution, which, of course, mains applied to show some disposition to buy good hides. And the strictly in the requirements for immediate and No. 2 at 9c. No. 1 Hamilton, distribution, which, of course, mains applied to show some disposition to buy good hides. parently quiet markets. Values generally remain low and show no sign of improvement. The dry goods trade has continued very quiet the past week. The demand from all quarters and on all accounts has been strictly moderate, almost wholly of a hand to mouth character. There is some preparation going on to get out samples of spring fabrics, and some few orders have been placed for future delivery. In most of the large houses stock taking will be commenced next week, and no improvement is looked for for some time.

The auxiety regarding the disposition of our surplus Wheat for this year, is one respecting which opinions disagree There is a common sense one, however, which promises to tell effectively on values in the near future. I'we facts cannot be ignored with impunity. First: at the low prices which have prevailed, the consumption throughout the world has been enormo sly increasel, and new uses have been found for the product; Second : the Winter Wheat acreage in this country for is quiet. Our quotations for strictly prime the next crop has been reduced 25 per cent. Europe produced sufficient to supply her requirements.

No country can supply this deficiency so cheaply as ours. In view of the second resen, any surplus of this crop which shall remain in hand in 1885, probably will not be burden because of the reduced production.
