to pay the charge was beyond their ability, or it may mean a sufficiency that need not be counted any other way than "It is written." But, whatever the several causes may be, it is within the province of inference, which being interpreted, says: "Sirs, by theology we have our wealth, while the wealth continues we shall better be to not take from that theology."

Now, while those directly associated with the movements of scientific thought will feel broadened and quickened to higher and higher, while the ordinary thinker will feel his storehouse replenished as a result of the visit of the scientists, will those who minister in spiritual things, when met with the enquiring and desire for God, not hush, confining to tell us that there is no antagonism between religion and science? Will they gravitate on towards stagnation, while science is achieving her victories and increasing the numbers of her worshippers? Will they still deplore and pass resolutions in defence of a faith that needs no defence, and, if it did, would seek elsewhere for it than in theology? Or will they, as the outcome of the visit of these men of "light and leading," see in science an inspiration, and feeling that inspiration, preach it as the deepest emanation of the spiritual life? We shall see.
