# **ALL DAY SESSION**

tric Light Company to Increase Rates Considered-Judgment Given Later.

velopment Company for permission to increase the present rate for electric light in the town of Sackville from 12 cents per K.W.H. to 15 cents per K.W.H.

cents per K.W.H.

The case for the company was presented by P. L. Trites. Objections to the proposed increase were presented by Mayor Wood and Ald. Secord for the town and Dr. Palmer for Mt. Allison University.

Mr. Trites, on behalf of the company, submitted a statement of cost of operation and the probable income for the present year and claimed on their behalf that it was absolutely necessary that more income should be obtained, owing to the big increase in operating expenses, if the company was to continue to do business without a loss.

Mayor Wood and Ald. Secord claimed that the town should not be charged any increase as they were paying at the present time about twice as much per K.W.H. as the ordinary consumer for the amount of current used.

Dr. Palmer, who was present on behalf of Mt. Allison University, questioned the figures submitted by the company and contended that instead of an increase the University should be given a lower rate as they used nearly one-querter of all the current produced for lighting purposes in the town. He advocated the adoption of a sliding scale on the same principle as the St. John scale. He admitted that it might not be possible to make the rate as low for the large consumer in a small town as it was in a large city but the same principle as the St. John scale. He admitted that it might not be possible to make the rate as low for the large consumer in a small town as it was in a large city but the same principle as anyther than the proposed in the two principle as the St. John scale. He admitted that it might not be possible to make the rate as low for the large consumer in a small town as it was in a large city but the same principle as the stream of the proposed in the same principle as the stream of the proposed in the same principle as the stream of the proposed in the same principle as the proposed in the same princip rate as low for the large consumer in a small town as it was in a large city but the same principle should apply in both cases. At the present time the University was paying the same price per K.W.H. as the smallest user of current and he contended that this was not just. He also claimed on behalf of the University that they should be only charged with one service instead of three as at present.

The University hat they should be only charged with one service instead of three as at present.

The University hat they should be increase asked for would amount to nearly \$500 more.

The company had adopted the principle of the sliding scale in the selling of current for power and it was only just that the same principle should be applied to the current for light.

About 10.30 the arguments were finished and the commission adjourned. They will consider the arguments awanced and give judgment later.
