

Horticultural Exhibition.

Brandon, Man., Aug. 5.—The fifth annual exhibition of the Brandon Horticultural and Forestry society of Brandon will be held on Thursday and Friday, Aug. 21 and 22, this year. The ardent efforts of those interested in horticulture and forestry have made this display the foremost of its kind in the west, and there is every indication that this year will prove a revelation. The prize lists have been before the likely exhibitors for five months. They are tastily gotten up in pamphlet form, and contain a list of over 400 prizes. In the past there have been large floral displays from Winnipeg and fruit from British Columbia, in addition to the large exhibit from the natural field of the society's work in the western half of the province.

A representative executive meeting was held to-night for completing preparations for the exhibit. There were present P. McKenzie, in the chair, P. Middleton, secretary, D. Sherriff, D. H. Scott, W. Warner, Jno. Wadga, Thos. Robertson and J. Noonan.

The society was shown by the secretary never to have been in a better financial condition. Both the horticultural and forestry exhibit from the experimental farm here will be complete and more attractive than ever, while there will likely be a very fine exhibit of fruit from British Columbia. Special preparations are being undertaken to maintain the high standard of the promenade concert held in the evenings, and this year the evening visitors are promised a highly delectable evening, entranced by the strains of music, while promenade amid fruits and flowers. Special committees were appointed to-night to arrange for the concerts, the staging of the plants and flowers, decorations, etc.

The following judges were appointed: Garden judges, S. A. Bedford and P. Middleton; show judges, H. Brown and F. Monsoff for flowers and plants, Thos. Robertson and Mr. Mansfield for vegetables.

The Territorial Crops.

The department of agriculture of the Northwest Territories has issued a crop bulletin, under date of July 20th,

which contains much useful information concerning the Territorial crops. The total acreage under wheat crop according to this bulletin, is 184,988 acres, which are expected to yield 18,467,000 bushels; the area under oats is 276,152 acres, expected to yield 10,361,190 bushels; and the total under barley is 29,772 acres, expected to yield 906,000 bushels. Last year the area under wheat was 304,697 acres, from which 12,808,447 bushels were obtained; the area under oats, 225,648 acres, from which 9,716,132 bushels were obtained; and the area under barley 24,792 acres, from which 795,100 bushels were obtained. In 1909, 412,864 acres were sown to wheat, in 1909, 362,523 acres and in 1908, 307,500 acres, which indicates a steady increase in the agricultural operations. Perhaps the main results of this bulletin can best be shown in the tabulated form. They are as follows:—

WHEAT.			
	Acres.	Yield.	
1902	304,697	18,467,000	
1903	304,697	18,467,000
