

## Conspicuous by their Absence

Nausea and Depression are unknown to our patients, and their general health improves from the beginning of the treatment.

Doctor, this is a matter to be well considered by you when advising where a patient be sent for the treatment of Inebriety or Narcotism. We use none of the injurious ingredients, strychnine, atrophine or apomorphine, so common in most treatments, and the results are complete and permanent.

You may at all times visit your patient, and keep him under your own observation.
