There is always one Right Way to do a thing, and a hundred Wrong Ways.

There is only one Right Way to dry Lumber.

That way is to dry it from the Centre to the Surface—begin on the Inside and work out. That's the method employed in

THE STANDARD DRY KILN

and known as the "MOIST AIR" PROCESS—It's not an Experiment, but a Successful Success. The "STANDARD" Kiln is used more extensively and is giving more general satisfaction than any other. It is simple—the elements of Drying are under perfect control. It is easily regulated to get just the combination of Drying Influences needed to dry any particular kind of Stock—whether Hard or Soft Wood. It dries rapidly and does its work well. And the Price—well, considering the high grade of equipment furnished, and the Drying accomplished—**IT'S CHEAP.**

SIMPLICITY, DURABILITY, CHEAPNESS

Will take saws from 6 inches to 5 feet diameter; sets the saw forward one tooth at a time automatically; sharpens any saw (rip or crosscut) perfectly, giving the teeth any desired pitch or bevel, and making all the teeth exactly alike. Will sharpen 20 teeth in an ordinary saw mill in one minute, or 100 teeth in a shingle saw in four or five minutes. The cut shows outline of mill saw 54-inch diameter.

PEMBROKE, ONT., Jan'y 28th, 1896.

Mr. F. J. DRAKE, Kingston:

Dear Sir,—Re the conversation you had with our manager, I am instructed to inform you that the machine we purchased from you early last spring has proved to be a very useful piece of machinery. Our Mr. McCool, who uses it, is greatly pleased with it, and recommends it to any person who may require a Saw Filer. Wishing you much success with your Filer, we remain,
Yours truly,
