Skunks and Raccoons.

I am thinking of starting a fur farm. I intend raising skunks and raccoons, and would like you to give me some suggestions as to their habits and food. How many skunks could I enclose on an acre? Also, raccoons?

Ans .- Much regarding fur-bearing animals is learned after the rancher operates for a year or two. The skunk in its natural life preys upon mice, salamanders, frogs and eggs of birds that nest on or near the ground. At times it eats carrion, and everyone knows his liking for the hens' nests and sometimes for the hen-roost. These obnoxious animals, however, are pre-eminently insect eaters. They destroy more beetles, grasshoppers and the like than many other mammals together. The skunk is active through the greater part of the year, and hybernates only during a short part of the winter. They differ from other hybernating animals in that the inactive period is apparently dependent solely on the temperature, while the mere amount of snow has no influence whatever upon their movements. Skunks have large families, from 6 to 8 young being commonly raised each season, and as a rule they all live in the same hole until the following spring. A great number of skunks can be kept in a small area in captivity. It would be hard to estimate the number that could be kept on an acre, for it would be exceedingly large. In ranches they are fed on cheap meats, such as dead horse, etc. Raccoons also feed upon mice, small birds, birds' eggs, turtles and their eggs, frogs, fish, crayfish, insects, and sometimes poultry. They are considerably nocturnal in their habits. However, they do come out occasionally on cloudy days. They haunt the banks of ponds and streams, and find much of their food in these places. The raccoon hybernates during the severest part of the winter, taking to its nest rather early, and appearing again in February or March. It does little in the way of constructing a nest, and usually locates in the trunk or preferably in the branch of a dead tree. From 4 to 6 young are commonly born at a time, generally early in April. The young remain with the mother about a

Gossip.

The Brant County Shorthorn Club is in a position to supply purchasers with bulls and heifers of the Shorthorn breed. They will supply them either singly or in car lots, and of either sex. For in formation, address the Secretary, Geo L. Telfer, R. R. No. 2, Paris, Ont.

Do not fail to see the advertisement of J. Lloyd-Jones' big sale in this issue. The date is April 6, and anyone wanting a horse, a good pony, any pure-bred sheep or good grade cattle should not miss the sale. The sheep are pure-bred Shropshires and Southdowns. Choice ewes bred to the best of rams. This offers a fine opportunity to start a pure-bred flock right. Wool and mutton are selling well. The cows are grade Shorthorns, Holsteins and Jerseys; ;all are young and some of the best. They are all fresh or coming in soon. The young cattle are in nice condition. See the advertisement; write for bills and particulars. Cheap rates on railroads; lunch at noon.

We are in receipt of a copy of the Canadian Holstein-Friesian Yearbook, This is a neatly-compiled, well-bound little volume containing nearly 400 pages, the third of its kind to be published by the Holstein-Friesian Association of Canada. It gives the record of milk and butter production of Holstein-Friesian cows which have been admitted to the Record of Merit and Record of Performance of the Holstein-Friesian Association of Canada, to September 30, 1914. The record cows are classified under their sires and under their dams, which gives invaluable information regarding family histories. and should prove of assistance to breeders. W. A. Clemons, St. George, Ont., is Secretary of the Breed, and those interested should get the volume from

John Deere Implements

The Spreader with the Beater on the Axle The John Deere Spreader

The beater—the business part of a spreader—and all its driving parts, are mounted on the rear axle. That is why the John Deere is the simplest, easiest running and most efficient manure spreader.

Here is what the beater on the axle means to you: 1st.—No clutches to give trouble

2nd.—No chains to break or get out of line. 3rd.—Less than half the parts heretofore used on the simplest spreader-some two hundred parts are done away with.

4th.-Manure not thrown on the axle-straw cannot wind around it. 5th.-You get big drive wheels and a low-down spreader, without stub axles-traction and strength.

6th.—Drive wheels back out of the way when loading—you see where you place each forkful.
7th.—Only hip high—easy to load.

John Deere One-Way Plow

The plow with the auto foot frame shift. This feature insures uniform plowing on hillsides or level land and in irregular fields. Full width furrow obtained under all such conditions. Team relieved of all side strain. Auto foot shift is easy to operate. A slight foot pressure swings frame and moves plow as desired.

A real power lift plow. Slight pressure of foot causes lug to engage in ratchet in the hub and forward movement of horses raises the bottom.

bottom.

High lift—plow easily transported over rough roads. Easily backed and turned.

Wide bearing base permits use of wide or narrow cutting bottoms and prevents plow from tipping on billsides.

Van Brunt Single Disc Grain Drill

No Seed Wasted—All the Field

No Seed Wasted—All the Field Sown. Van Brunt Drills have an adjustable gate force feed which compels an even, continuous flow of seed from each seed cup without bunching or cracking the seed. It cannot choke up.

The seed beats the dirt. Individually adjustable pressure springs can be made to force discs to cut furrows of even depth. Seed is conducted from hopper to furrow opener by metal tubes and there protected from dirt until it reaches bottom of furrow. All the grain is up and ready for harvest at the same time.

time.

Van Brunt Drills do not clog up, even in trashy soil, mud or gumbo. Spring steel scrapers keep discs absolutely clean. Disc bearings guaranteed to last lifetime of drill.

Grass seeder attachment can be furnished for any Van Brunt Drill. It will sow broadcast or drill, as desired

The Accurate "Natural Drop" Corn Planter

The John Deere No. 999 plants 2, 3 or 4 kernels as desired. You merely shift a foot lever. Quick change hilling to drilling, and also in varying drilling distances. Its corn plates all have 16 cells.

Accurate, because surface of hopper bottom and openings to seed cells are oblique or sloping. Kernels naturally move toward and fill

cells rapidly. Better than any other method because more accurate.

Enclosed gear case, oil tight, dust proof.
Gears always in mesh and not under severe strain. As perfect a driving mechanism as that used on automobiles.

Easily detachable runners, simplified checkheads, disc marker without rope and underhung and are also improvements you will appreciate.

reel are also improvements you will appreciate.

Don't Pay Your Hired Man Extra Wages

Poor tools cut down his efficiency. Use good judgment by buying from a man who has an established reputation for high quality implements—your nearest John Deere Dealer.
