

Don't Wear A Truss

After Thirty Years' Experience I Have Produced An Appliance for Men, Women or Children That Cures Rupture.

I Send It On Trial.

If you have tried most everything else, come to me. Where others fail is where I have my greatest success. Send attached coupon today and I will

The above is C. E. Brooks, of Marshall, Mich., who has been curing Rupture for over 30 years. If ruptured write him to-day.

Send you free my illustrated book on Rupture and its cure, showing my Appliance and giving you prices and names of many people who have tried it and were cured. It gives instant relief when all others fail. Remember I use no salves, no harness no lies.

I send on trial to prove what I say is true. You are the judge and once having seen my illustrated book and read it you will be as enthusiastic as my hundreds of patients whose letters you can also read. Fill out free coupon below and mail today. It's well worth your time whether you try my Appliance or not.

FREE INFORMATION COUPON

C. E. Brooks, 236 State Street, Marshall, Mich. Please send me by mail in plain wrapper your illustrated book and full information about your Appliance for the cure of rupture.

THE BEST WAY TO KEEP THE HANDS CLEAN.

Women have to do dirty work on the farm as well as the men. Cleaning lamps, blacking stoves, paring potatoes, scrubbing floors and milking, are all hard on the hands.

The thousands who are using SNAP find it exactly what women need, and would not be without a can.

It is a wonderful hand cleaner, instantly removes dirt, stains and odor without much rubbing, and keeps the hands smooth and free of chaps. It is healing and antiseptic. 15c. a can. 114

QUESTIONS AND ANSWERS. Miscellaneous.

LUMP JAW—SCOURS.

1. I have a cow with lump jaw. Is there any danger of infection from her milk, either for her calf or for persons using the milk. The lump is not broken, and never has broken. Would there be any more danger if the lump should break?

2. Would you also tell me what proportions of formalin to use for scours in calves?
A. T. M.

Ans.—1. Lump jaw, or actinomycosis, is not supposed to be a contagious disease, although animals ingesting any of the suppurative matter from the open tumors or having any abrasions exposed to this material, might contract the disease. Give iodide of potassium three times daily in a quart of water as a drench, commencing with dram doses, and increasing the dose daily by about 20 grains until desire for food and water fails, tears run from her eyes, and saliva from her mouth, and her skin becomes scruffy. Then cease giving the drug. If necessary, treatment can be repeated in two months. The milk is not supposed to be affected. It would be safe for the calf throughout treatment. Would not use it for human food during treatment. Rub an ointment composed of 2 drams each of iodine and potassium iodide, mixed with 2 ounces of vaseline, on the lump once daily. The only increased danger from the lump if broken would be as before stated, of ingestion, etc., by other animals.

2. For applying to the umbilical cord, a solution of 1 part of formalin to 10 parts water. For internal use, 1 part of formalin to about 15 or 16 of water, fed in tablespoonful quantities in a pint of milk three or four times daily.

SUMMER—FALLOW—FEEDING STEERS—ORCHARD CROPS.

1. Have thirty-five acres, sandy loam, mostly sandy subsoil, but some light clay. Land is low, nearly level, and damp until late in spring. Land is dirty with sow thistle, mustard, twitch, and other common weeds; in fact, a little of everything. Is said to have grown some good crops of hay, but is partially run out. Made an attempt to clean it last year by summer-fallow, but pressure of other work prevented successful treatment. I wish to sow it down to pasture for a few years at least, but as we will have about thirty acres this year in corn and root crop, do not know how to accomplish a thorough summer-fallow. What treatment would you advise, and mixture for seeding?

2. Am carrying steers over on cut straw and silage, to finish on pasture. They are thrifty, but, of course, not gaining much. Would you advise purchasing meal or other feeds, at present prices, to feed before turning out?

3. Planted out orchard two years ago, grew roots between rows first year, the same last year, but catch was so poor I plowed up and sowed millet. Would you advise cropping this year, or keeping cultivated?
D. H. R.

Ans.—1. A summer-fallow not well worked to keep down weeds, often, rather than cleaning the land for which it is intended, aids weeds to make headway. Thirty-five acres is rather a large summer-fallow, but very dirty land should not be seeded down. If possible, work the land thoroughly until time to sow buckwheat, then sow this rather thick to smother out the weeds remaining. Some have reported good catches of clover in buckwheat, but if sown thick this would not be likely. This treatment would defer seeding one year, and would likely rid the land of many of the weeds. A thorough summer-fallowing would be the best treatment.

2. It never pays to let the steers go back. If not thriving well, feed a little meal. They will go on grass in better condition to go on and make more rapid gains.

3. A part of the space between the rows of trees in a young orchard can be used for growing hoed crops which require frequent cultivation. As the orchard grows older, clean cultivation, followed by a cover crop, is the proper method. It is not likely a root crop between the trees, and handled judiciously, would be any damage this year.

The Biggest NEWS in the "Cow World"—A Genuine 20th Century Wonder

GET the Biggest News in the "Cow World" or 25 years by sending us your name. Get this Book whether you buy or not. We leave the facts to you—with 100 points and dozens of big photographic illustrations—proofs by U. S. Government Tests—State Experimental Tests—Testimony of thousands of satisfied users of THE AUTOMATIC that it is the most wonderfully working and DEPENDABLE Separator and Engine of the age.
