Richness and Liveliness of Summit Camp

Grand Forks, B. C., May 10.-[Special.] Whatever merits other camps may described as the Boundary district. This was the conclusion reached by your coryears ago an unbroken solitude had reigned since the dawn of creation, miners today are sinking shafts and driving tuncopper and gold with splendid prodigality. To extract these metals and add them to the world's wealth is a problem that is being rapidly solved. Huge plants, the transportation of which represent a small ortune, are ceaselessly throbbing; vast ore dumps attest the fact that mining in Summit has long since passed the ex-The prospector seems to be everywhere.

From gulch or slanting hillside comes ever and anon the boom of shots that reverbrate with a thousand echoes. The camp embraces a sea of mountains drained by Boundary, Brown's and Fisherman creeks. The largest area, however, converges towards the last named, a noisy stream, which, after a six-mile descent, empties into the north fork of Kettle River about seven miles above Grand Forks. At its headwaters is a slightly undulating valley, or basin, probably a mile long, that gently trends easterly before shelving and narrowing into a precipitous canyon. Down this yawning chasm, after gaining their first momentum, rush with an angry roar the waters of Fisherman creek. In the center of this mountainous valley, or plateau, is located Summit City, a typical mining camp that within a radiof one mile is surrounded by at least 20 mines and prospects. A more ideal situation could not be imagined. It is 2,500 feet above the Kettle River valley. The city," for such it is ambitiously called, already boasts of many of the adjuncts of civilization; true its population scarcely exceeds 100, but what is lacking in numbers is compensated for in concentrated energy. Quite a building boom is on, A small sawmill near by cannot buzz fast enough to supply lumber. It is the story Rossland over again. There are three hotels, one saloon, four stores, a laundry, a colored barber and other "industries" characteristic of western camps. The Arlington, conducted by J. McNeil, contains 40 rooms, and is pretentiously wainscoted throughout with dry cedar. The proprietor takes pride in relating how he "packed" the lumber over the mountains. His hotel represents an investment of \$11,000, and is proving a bonanza. Tents and wooden huildings fringe the main street. Other prospective thoroughfares are more or less

leared, their vistas finally disappearing in the dense timber. The city becomes decidedly lively at dusk, when the miners off shift tramp into this common meeting place. Mirth and jollity reign supreme. The scenes that were enacted the evening the correspondent arrived, it seems, are repeated nightly. The hotels and saloons did a thriving trade. They were crowded to overflowing. Refreshments could not be served fast experiences of every camp from the Mexidips at an angle, was again caug can line to Klondike-prospectors, freightkeg after keg was emptied. Others, with quieter habits, sat around tables, hazarding perchance a month's earnings on the turn of a card. The chips rattled till dawn. From half a dozen tents floated the discordant sounds of a concertina, mouthorgan or the dulcet tones of a seasoned mit City certainly possesses a future. It occupies the same relation to Summit camp that Phoenix does to Greenwood camp. It will ever be a payroll town. Col. possibilities with a great deal of convinc-

ing eloquence. The city occupies a tract of 400 acres. Throughout its limits courses a branch of Fisherman ereek. The main stream, rising a mile southwest, contains 100 miner's inches of water, enough for light, power and domestic purposes for a population of 30,000. The intention is to tap the creek, conducting the water in a mile flume to 200 feet above the city. The Summit Water & Power Company, recently incorporated, has secured plans, and the work of construction will be started this summer. The natives will never have to worry about a wholesome and abundant supply electricity to the mines.

The Oro Denero was the first property inspected. It lies just beyond the city limits in a northwesterly direction. Leading shareholders are Hon. Smith Curtis, inister of mines, and Ross Thompson, the founder of Rossland. Development work has been confined to a large hill, whose top is surmounted by the shaft and power house. Just why a shaft was sunk at this point seems to be a mystery when series of tunnels. However, a radical an advisory capacity. His recommenda- miles from the mine. tions did not meet with approval. He urged the abandonment of the shaft work, and declared the Oro Denoro to be a tunfew months later his theories were confirmed, when the railroad graders uncovered 20 feet of ore in a curve half way cate the ore bodies before undertaking No. 2 tunnel penetrates the hill a distance force will be doubled. No expense which finally culminated in his death.

175-toot shaft. This connection, apart from B. C. was incorporated a few tho other considerations, provides excellent preceding level, has been extended 316 feet. For the first 20 feet of that distance -A Visit to Some Great Proper- stringers of chalcopyrite were encountered and the remainder of the tunnel traverses vein matter. No. 1 tunnel, about 275 feet turther west, is 84 feet long. Twenty feet from the mouth ore was struck, and it continued solid for 18 feet. This work ing is 39 feet below the ore body uncoverpossess, Summit camp is the richest and ed by the railway. The work of crosscutmost lively in the large region commonly ting and blocking out these immense ore bodies is a simple matter. Ore was also encountered in considerable quantit'es in the shaft. The present plant, which will respondent during a recent visit. Into be enlarged shortly, consists of a 35-horse these eternal hills where, until a few power boiler, 15-horse power hoist and a two-drill compressor. Throughout the var ious ore bodies have a perceptible dip to the southwest. Recently while stripping the surface at a height of 260 feet from nels. Here cosmic forces have distributed No. 3 tunnel the miners struck a ledge or deposit of magnetic iron, largely impregnated with copper pyrites. The ore on the dump is upwards of 400 tons. An experimental shipment from three different workings averaged \$18 per ton, and netted \$11 per ton after payment of freight and treatment charges. The principal values are in copper, the gold and silver being

quite subsidiary.

An eighth of a mi'e distant the railway spurs divide, one climbing upwards to-wards Phoenix, the other branching off to or it may be imbedded in the body of the Emma, B. C., R. Bell and other properties in the northern belt. Summit lies between, nestling in the shadow of the

Adjoining te Oro Denero to the northeast is the Emma, controlled by Mann & Mackenzie, the well known Canadian railway magnates. It comprises the Jumbo, Mattie Davis, Emma, Minnie Moore and Mountain Rose. The principal workings are on the Emma, for which a new plant was recently ordered. The main shaft has been sunk to a depth of 105 feet, the bottom being in ore. An 18-foot crosscut was driven from the 75-foot level. It showed up nine-foot body of \$25 ore. The Emma has all the ear-marks of a mine. The Mattie Davis is situated south of the Oro Denero, and has a well-defined lead on which only surface work has been performed. On the Mountain Rose a tunnel driven 20 feet, has not yet traversed a ledge carrying small copper and gold val-

Another well known claim is the Blu Bell, lying between the J. S. and the Mountain View. It has a good-looking ledge, that is being exposed by large open cuts. Two shafts have been sunk 12 and 14 feet respective'y. W. Shaw, the owner, is one of the pioneers of the camp. He says he has obtained a series of assays averaging 20 per cent copper, \$4 gold per ton and small values in silver. He also owns the Untario, which is located between the Cordick and the B. C. The surface is heavily covered with "wash," but three distinct ledges have been defined. They extend into B. C. ground. Mr. Shaw has opened up several good showings, the returns all corresponding with those obtained from the adjoining mine.

The Cordick lies north of the R. Bell. It has a splendidly defined ledge that can be traced for upwards of 700 feet. At several points throughout this distance it has been opened by means of open cuts. Two shafts 20 and 42 feet, respectively. have been sunk in solid metal. The claim is owned by Capt. R. C. Adams, Montreal South of the Blue Bell is the J. S. 1 500 feet west of the R C mine A shaft on a ledge 20 feet wide has been sunk partially in ore to a depth of 50 feet. From the bottom of the shaft a crosscut has enough. Grizzled miners-old-timers with been driven 50 feet. The ledge, which crosscut. Sinking will be continued to the ers, gamblers, "tin-horns"—young and old 100-foot level when another crosscut will clinked glasses in good-fellowship as be driven. A number of assays gave cop Lilla Garland Continues to Improve—She per values ranging from \$3 to \$50 and averaging \$5 in gold and four ounces silver per ton. The owners, James Jarrel and feel confident the property will soon be on a shipping basis.

Adjoining Summit City to the east is siren. Law and order prevail withal. Sumproposition in the Boundary country. ior, which extends clear across the mid Two shafts, a few hundred feet apart, have been sunk on the same ledge. They It is certain that there will not be much are 82 and 42 feet respectively. From the disfigurement of the face. It may be Haygood, a leading resident, pictured its bottom of the latter a 47-foot crosscut was broadened a little from the effect of the run before sinking a 30-foot winze. The crushing downward blow which it receive ore from the winze, taking the average of 20 samples, gave 17 per cent copper, 36 there will be no noticeable effects of the ounces of silver and \$4 gold per ton. Jack terrible injury which she received. The Hanly, an expert, has just ordered a pump little patient is as merry as a lark, and as and hoist, and development will be pushed she is quite witty, she cracks some humorimmediately with redoubled vigor. The out jokes. A friend called a few days property is grouped with the Remington, the company, which is incorporated under the laws of Utah, being the Keough Gold have a swelled head, and that is a coma reservoir about half a mile distant and & Copper company. The virtual owners plaint which a great many men have." are Mr. Hanley and Baumberger Bros., of Salt Lake, Utah, The Remington has not yet been systematically developed, but several pits have revealed some nice look-

ing ore. The B. C. mine is a wonder. Although of pure water for mixing purposes. The only 3,000 feet of underground work have his cabin on Wednesday, was a pictures power company also purposes furnishing been done, upwards of 15,000 tons of high que character. On the the figures furnished your correspondent cade City, he had a cabin and owned sevgrade ore have been extracted. These are by Superintendent Scrafford. The showing is all the better when it is realized that. no stoping has yet been done. The property is situated half a mile north of Summit City. Shipments to the Trail smelter to date amount to 3,000 tons. Though the management decline to authorize a statereturns, after paying freight and treat- was in his cabin. This meant something better results, at a reduced cost, could ment charges, yielded over \$16 per ton. have been accomplished by driving a The principal values are in copper. The ore was treated at the Trail smelter. This change of program was adopted when involved a haul of over 100 miles. It is an Neil Cochrane, the superintendent, as easy calculation to estimate the higher resumed his duties in November last. At turns that will be received when the ore an earlier period he had been consulted in is handled at the Grand rorks smelter, 15

The main shaft has attained a depth of 279 feet. Crosscuts have been run from the 50, 150 and the 250-foot levels. At nelling proposition, pure and simple. A the lowest level the ore body has widened to 57 feet. The amount of ore in sight is estimated at one hundred thousand tons. A magnificent new plant is being up the hill. Mr. Cochrane, on taking installed. It comprises two 80-horse charge, at once proceeded to strip and lo- power boilers, a 50-horse power hoist and the ore bodies before undertaking half of a 20-drill Rand compressor. NORTH FORK OF KETTLE RIVER of 150 feet, 66 feet of which is in ore. Seems to have been spared in erecting From the end of the tunnel a drift extends 245 feet connecting with the bottom of the buildings, bunk houses, ore bins, etc. The ago under the name of the B. C. Chartventilation. No. 3 tunnel, tapping the outer edge of the hill 81 feet below the million dollars, but there is no stock on the market. The owners are James Ross the retired railway contractor, and Clarence J. McCuaig, the mining operator Both are Montrealers.

Less than three years ago- this now world-famed mine was purchased for \$500 resold for \$60,000, and then acquired by the present owners for \$300,000. The Montrealers closed the deal on the report of Major R. G. Edwards Leckie, manage

of the Republic mine.

It would take volumes to describe all the properties visited. The list included the Mountain View, Homestake, Mary B., Tiger, Rathmullen group and Josie.

They will be dealt with in future letters. OPERATION PERFORMED.

McArthur's Paralysis Due to Bullet Injuring Spinal Column.

An operation was performed on Her bert McArthur, who was recently shot by Raphael Albi, for the purpose of determining the cause of the paralysis of his legs. The operation revealed that the bullet passed between the eleventh and twelfth ribs at a point four inches to the left of the spinal column. It passed downward and struck the spinal column below the twelfth rib. The bullet, when it hit the vertebrae, at all events could not be located. The paralysis is probably the cause of hemorrhage from the spinal col-It was found that considerable blood was oozing from the vertebrae at the point where the bullet struck it. The bullet did not touch any of the organs Means were provided for draining the wound, and at the conclusion of the op eration, which was performed by Drs Reddick and Bowes, it was conceded that McArthur had a chance for recovery. At a late hour this morning McArthur was in considerable pain and had not rallied from the shock of the operation quite as rapidly as was expected. He is a man of strong physique, and it is probable that he will improve steadily after he rallies from the shock of the operation.

GOES TO LEADVILLE.

Mr. J. V. Bohn Accepts a Place With a Company There.

Mr. J. V. Bohn, M. E. chemist and asayer leaves today for Leadville, Colorado, for the purpose of accepting a position there as engineer with the Home Mining company, which is the largest corporation operating in that camp. Mr. Bohn is favorably known in this city. In March, 1896, about a month after Mr. F. Aug. Heinze started the smelter at Trail, he was appointed chief chemist and assayer there. This place he held for a period of two years or until Mr. Heinze sold the smelter in 1898. Then Mr. Bohn accepted the place of chief chemist and assayer with the British America Corporation which place he held until the 1st of April last. Previous to coming to Rossland Mr. Bohn was the chemist for the Montana Ore Purchasing company, and for a time was assistant engineer for the Anaconda Mining company. Before he went to Butte he was assistant manager of the City mines in Leadville. Mr. Bohn has made an enviable reputation for himself while in the Kootenays as a chemist and assayer. In a social way he and his acand they are a couple who will be missed by the people of Rossland and vicinity Mrs. Bohn is at present in New York where she is visiting relatives. She will join Mr. Bohn in Leadville in a few

He Was a British Soldier and Then Blockade Runner.

Alex. Carson, who was found dead in about half way between this city and Caseral claims in that vicinity on which considerable work has been done. Scores of travelers can testify to his hospitality. They were welcome to food and shelter, and it only offended him to be offered pay for his accommodation. It is said of him that he never was known to refuse to share with the traveler whatever there for he had to pack all his provisions over the Dewdney trail from this city. To his confidents he stated that he had been in the British army and served there for sev eral years. During the civil war in the United States he was one of the crew of a noted blockade runner, and passed through some exciting scenes. After the war he came west and has for years been a prospector. The cause of his death was undoubtedly heart failure. Those who have accepted his hospitality at the cabin say that he would frequently jump up from his bed and walk the floor, complain ing that he was almost strangling for lack of breath. This, it is claimed, was due to the weak action of the heart. Last mine has been extensively opened up. Scrafford stated that within 30 days the probably accentuated his heart disease,

POLITICAL SITUATION.

While Hon. Smith Curtis Is Popular, the what, if elected to the legislature, People Are Not in Love With His Er-

ratic Chief-Business Outlook. Mr. Duncan Ross, the managing editor of the Greenwood Daily Times, is in the city for a few days of rest and recreation. He was seen by a Miner representative last evening, and, in speaking about affairs in the Boundary country, he said: "The political situation is somewhat mixed. While the Boundary country is strongly liberal, there is a strong feeling against Joe Martin, and the Hon. Smith Curtis is a much more popular man than his leader. While many would like to vote for the minister of mines on personal grounds they will be forced to vote for nis opponent because they do not consider that it is in the public interest to encourage Martinism in any way. This feeling s prevalent evon among the laboring classes. They believe that Mr. Curtis has the interest of the laboring man at heart, but there is nothing in Mr. Martin's record as a public man that can justify them in supporting him in any way. A vote for Mr. Curtis is a vote for Joseph Martin, and with no other candidate in the field there is no alternative but to MAKE SO MANY WOMEN LOOK oppose his candidature in this constituency. Mr. Curtis, notwithstanding the fact that he is associated with such an unpopular leader, will poll a big vote in the Boundar vocuntry, but a majority of

personal prejudices and will against any one who has committed elf to Joseph Martin. This was clear shown at the meeting held in Green wood last week, where nearly 1,000 peopl heard the views of the Premier, and where the majority of them, though not expressing their opposition to Mr. Curtis, cleardepends on the course he will pursue servative party, anxiouns only to exploit that he is more anxious to uphold good Pil st he will certainly those Liberals who believe that there that the

sist in forcing party lines they will only succeed in lessening the chances of defeatposition that is intensely repugnant to policy of wild and experimental legislation should be completely squelched, and the best elements in both parties sh com-

times, which the business man does not appreciate, but which cannot possibly be avoided in any mining district. The voided in any mining district. Granby smelter at Grand Forks is now ready to receive ore. The British Columbia Copper company's smelter at Greenwood will be completed in a few months. All the mines are being placed on a shipping basis, so that in a short time the reaction will set in, and the whole district will enjoy the advantages accru-

C. E. DEMPSTER RETURNS.

Has Had a Prolonged Trip in the East— The Feeling Evinced.

Mr. Charles E. Dempster, the well known mining broker, returned on Sat-urday night from a varied trip to the His itinerary covered Chicago, New York, Boston, Bayonne, N. J.; Halifax, Bridgetown, N. S.; St. John, N. B., and Schreiber, Peterborough, Exbridge, Stouffville, Brantford, Springford, Woodstock, London, Petrolia, Watford, Sarnia, Windsor and Toronto in Ontario.

He states that the general feeling in Eastern Canada is one of disappointment, which is tempered by a hope that now the labor troubles are settled in British Columbia things may take an upward move. There is a distinct feeling, Mr. Dempster says, that if some of the mining companies whose stock has been floated in the East were to show returns confidence very quickly would be restored. There is also an inclination in Canada that the investors should have their own men on the mines, and thus have some say with the management of the properties in which they have invested. In To-ronto the effect of the slump in War Eagle and in Deer Park has been disas-

The feeling in the States is more or. a reflex of the feeling in the Dominion. Many of the monied men, however, expressed their willingness to Mr. Dempster to take up or consider developed properties; but he said only su on properties as are on a business basis can handled hereafter in either the United

States or in Canada.

Personally, Mr. Dempster stated, as fer as the companies whose interests he represented are concerned, he had nothing to complain of and expressed himself more than satisfied with the business results attained, and he said that he felt very much pleased with the cordial reception given him, as a British Columbian mining man, everywhere.
