Gospel From Every Land Summarized for Busy Readers.

A BLACKBIRD has reared its young in a hothouse at Dunstable, Swallow, in a built in a Suffolk school house, and is not disturbed by the presence of the children.

UT IS reported that the marriage of the Princess Helene of Orleans, with the Duke of Aosta, has turned out unhappily and that the Duchess is anxious to obtain a separation, but has been prevented so far by the Duke of Aosta.

THE House of Lords was recently surprised at the appearance of the new Lord Portlough, an immensely rich landholder in Argyllshire, just announced on his birthday. He stood on taking oath, 6 ft 10 in. As head of the clan "Callum" he is generally addressed as "the MacCallum" and from his height and physique is fully entitled to be that head.

ACCORDING to the Jewish Chronicle, Baron Edmund de Rothschild has established another colony in Palestine. The new colony, which is situated in Galilee, not far from Damascus, consists of a village of 3,000 acres, with many a river Jordan. This settlement will be colonized by 50 farm laborers of tried experience.

THE following amusing bit of evidence was heard in Hamilton (Scotland), J. P. Clerk of court to a female witness (wife of the accused) why does your husband keep a dog? He cannot pay for the license? Witness—Well, ye see, a man aye fancies something. If he didn't fancy a dog he might fancy something else. He might fancy another man's wife. (Great laughter.)

IT IS related that a lady was introduced to Sir Morell Mackenzie at a London soiree as "John Strange Winster," and when he incredulously repeated the name she replied, "Oh yes! I'm Boodle's Baby." Whereupon the great physician drew a friend aside and confided to him that he had just met a poor demented laborer who was introduced as a man had thought herself a baby.

IT IS interesting to note the change in the cost of a fair copy of the Bible during the course of centuries. Dr. Plummer, in his tract, "How to Use the Bible," says: "In the thirteenth century, in England, a fair copy of the Bible cost £25. At the same time, a copy of the Bible with a few explanatory notes, cost £20. Then the wages of a laborer amounted to but ninepence a week."

A MEDAL, called the Neumayer medal, will be conferred soon by the Berlin Geographical Society on persons who have distinguished themselves in geography or meteorology, in honor of the 70th birthday of Prof. George Neumayer, who, after having been director of the Melbourne Observatory, has since 1870 been at the head of the Marine Observatory at Hamburg.

THERE came near being a row at the memorial services for the late Marquis de Mores in the Madeleine Church in Paris the other day. While the mass was being celebrated several wagon loads of English tourists drove up and tried to enter the church. They were turned back with difficulty after a long wrangle with the beaules and some of the Marquis's friends, who remembered that he had died in making what he intended to be an attack upon England.

DURING the progress of the terrible heat wave over Australia in January last, 300 persons died of sunstroke. The Government requested a medical board to issue directions to the people as in case of an epidemic. The doctors declared that all predisposing causes undue indulgence in intoxicating liquor is the most common and the most dangerous. They added that liquor was not only a predisposing cause, but would also be a very dangerous remedy if prescribed to those suffering from the heat.

IT IS proposed to present a testimonial to Benjamin Jeans, the oldest guard on the Great Western Railway, if not in England. Jeans will retire from the company's service at the end of the present month, after 33 years' service. He has, it is estimated, traveled some 500,000 miles in his guard's van. When he joined the service the railway guards wore guinea beaver hats, were not permitted the adornment of a moustache, and on Sunday it was imperative that they should wear white trousers.

QUEEN VICTORIA has had several telephones installed in Windsor Castle. They are placed on her Majesty's study table and communicate with Lord Salisbury at the Home Office, Marlborough Place, and telephones will be introduced at Windsor Castle and the Queen will be enabled to hear all the latest entertainments in the London theatre and concert halls. It will even be possible for the royal

ears to hear the latest music hall songs, and that, too, without compromising in the slightest degree queenly dignity.

DURING her recent visit to Spain the Empress Eugenie received much attention from the authorities and nobility in Andalusia. She visited her estates in the South of Spain, and the house in Granada where she was born. She is now on her property at the Marchioness of Viadem, who has kept in its original state the room where the Empress was born. The Empress sent Queen Christina a courteous telegram on landing, to which her Majesty replied, inviting the Empress to come to spend a few days in Madrid. This invitation was gratefully declined, as the Empress could not spare time to visit the Spanish capital.

DOGS and diplomacy do not seem to harmonize. The Italian agent at Seville recently and whistled for him. He was at once arrested by the police, taken to the station house, and detained for nearly an hour, till he was able to prove who he was. Bulgaria has had to apologize for this. Almost at the same time, Spain was begging the pardon of the Russian Legation at Madrid for similar acts. Baron Wrangel, First Secretary of the Legation, had strolled out with an unmuzzled dog in his arms, when the police, to enforce the city ordinance against unmuzzled dogs, fell upon him and tore the dog away by force, scratching and bruising the Secretary.

MISS NANCY GOLDMAN, a maid of New York, is in great distress, all because she was not content with the color nature gave her hair. Nancy has a lover, or had one until the hair catastrophe took place. Her young man, August Schwartz, did not admire the shade of her locks, which was a pretty pronounced red, and so she went to a hair-dresser to have them bleached. Her tresses came out of the order and the hair-dresser did not please the critical August, either, and so she went back to the hair-dresser to have the original color restored. This was the last stroke. The second process made Nancy's hair turn red, white, purple, and black, and it is beginning to fall out. The variegated plumage was more than she could stand, so he broke the engagement, and now Nancy is suing the hair-dresser for \$2,000 damages.

SOME details are to hand by the mail just in of the wedding of Khama, the South African king who recently visited Queen Victoria, the bare fact of which was announced some time ago. The ceremony was performed at Palapye by Mr. Willoughby, the missionary who came to England with him. The chief had gained sufficient insight into the ways of that country to know how a function of this character should be carried out. He appeared at the altar dressed in a frock coat and light trousers and a white tie; while his bride, a young woman of about 20 years, wore white satin, with a tulle veil and orange blossoms. Afterwards the guests met at the house of the missionary, where the occasion was being celebrated, the chief attraction being a great wedding cake. The wedding ceremony took place at the abnormally early hour of 9 o'clock.

PETER THE GREAT'S house at Zaandam, in Holland, has just been inclosed within a protecting building. The opening ceremony was performed in the presence of the Russian Consul General and other notabilities. The building bears a commemorative tablet with the following inscriptions, in Dutch and Russian: "In 1697 the Czar Peter the Great dwelt in this house on the Krump from 18th to 25th of August. In May, 1698, he visited it on his way back to Russia. In 1717 the Czar Peter the Great again visited it with Empress Catherine and their suite. In 1818 King William I. (of the Netherlands) bought it for the purpose of offering it to the Grand Duchess Anna Pavlovna, married in 1816 to the hereditary Prince, afterwards King William II. In 1836 King William III. presented Peter the Great's house as a gift to the Emperor Alexander."

OYSTERS should not be eaten by dyspeptics, if we are to believe a statement in Modern Medicine with regard to the number of microbes in oyster juice. Says that paper, describing recent experiments: "It was found that one cubic centimeter of oyster juice produced, in an agar culture, 1,500,000 colonies. This observation entirely justifies the maxim of the late Dr. Jardin-Beaume, one of the most eminent French physicians, that oysters should never be eaten by persons with feeble digestive powers or those suffering from dilatation of the stomach. There is no article of food which decomposes more readily in the stomach than does the oyster, and none more likely to communicate infection through the setting up of decomposition and fermentation in other foods. The oyster is always a carrier of microbes, and recent observations show that it often communicates typhoid fever and other pathological germs."

SEPTIZEBERGEN will have a brilliant season this year. The Andree expedition will be followed by a German steamer from Hamburg, which will reach the islands in time to see the balloon start. A Norwegian steamship company will run steamers regularly while the season permits, and will put up a temporary hotel on the Elv Flod. Mr. J. Russell Jeaffreson of the Geological Society, will explore the interior of the western island, and if the ice will permit will try to visit the islands between Spitzbergen and Franz Josef Land. Another English expedition with which went Mr. Trevor Battye, who explored Kolner, started recently for Spitzbergen. The relieving vessel for the Jackson-Harmsworth expedition, the steam yacht Windward, has just started for Franz Josef Land, with provisions and sledges, will embark live sheep and reindeer in Norway and convey them north. The North Atlantic will be more lively beyond the Arctic circle this year than ever before.

LADY BURTON'S will is a curious document. She gave orders that after her death a doctor should pierce her heart with a needle, she was then to be embalmed in a curious way and placed by the side of her husband, in the tent at Mortlake. She had been a valet, however, and left directions that in case a revolution should break out in England, that she should be despatched to the dead.

her body and her husband's shall be placed in the vault. The strangest provision, however, in view of the loyal manner in which his wife stood by Sir Richard Burton during his lifetime, is that by which Mr. Coote, secretary of the National Vigilance Society, the English Anthony Comstock, is made a literary trustee of Burton's works, and is directed not to allow an indecent or obscene word to be issued in connection with the publication of his books. It was by Mr. Coote's advice that she burned her husband's "Scented Garden," for which she had been offered \$30,000, and another work for which \$5,000 was to be paid.

As a Favor to Hunt Susan.

That the Colonel Will Never Make Such a Call Again.

"I say," said the Colonel, looking around the table, "did either of you fellows ever try to hunt up one of your aunt's sixth or seventh cousins whom you had never seen?"

"I never," said Johnson, "never had that pleasure. Kindly pass me the mustard."

"Well," continued the Colonel, stroking his mustache tenderly, "if ever you get to feeling too happy for health just try it. It's a sure cure for undue joy."

"A few weeks ago," he went on, "I got a letter from Aunt Susan, who lives in Chicago, asking me to look up the second cousin of her sister's first husband's step-brother."

"Her what?" inquired Johnson, sharply.

"I said it," retorted the Colonel, "if you can't understand anything as simple as that I give up trying to tell this story. The lady's name, Aunt Susan said, was Mrs. James Jackson. As I don't often have a chance to do anything for Aunt Susan I consulted a directory with all the names. I found there were thirty-seven James Jacksons in the city."

"What did you do?" said Johnson.

"Put 'em in a hat and draw one!"

"I did think of sending a type-written letter to the fifty-three Mrs. Jacksons," answered the Colonel, "asking them if they were the second cousins of the step-brother of my Aunt Susan's sister's first husband, but it occurred to me that one or two of the seventy-two James Jacksons might be unmarried, in which case they would probably say mean things about me, so I wrote to Aunt Susan and asked her which one of the eighty-three Mrs. Jacksons was the second cousin of her sister's first husband's step-brother by marriage this one was, and where the devil she lived. In a few weeks I got an answer saying that the second—"

"Yes, we know," said Johnson, "Well, all right—she lived at a certain number in Forty-second street. So one Sunday evening, being in a benevolent mood, though I was a trifle out of money to the people of Pennsylvania, New York, Kentucky and Indiana. Many a man who has lost his fortune in the drying of oil wells, would be again able to pump dozens of barrels, hundreds of wells will spring into new life, thousands of dollars will be made from iron mines, and the property, and millions of barrels of oil will be added to the annual production of the country."

The plan made by Mr. Young is in the hands of the Standard Oil Company, and will be thoroughly tested. As that company owns so much oil property, and has so much of the saving of great wealth to them, as well as to the many hundreds of people all over these districts in New York and Pennsylvania.

A REMEDY

FOR THAT MOST DISTRESSING MALADY.

REV. J. M. McLEOD, Zion Church, Vancouver, B. C.—"It is nearly three months since I finished the package of K. I. O. G., and though I have for more than twenty years suffered from Indigestion that one package seems to have wrought a perfect cure. I have not had the slightest symptom of a return of my old enemy. It affords me much pleasure to state that I have been able to do my duty as a minister of the Gospel, and that I am now able to do so with a new vigor and energy."

"I am, yes—so she did," said Mrs. Jackson, looking as if she were having a tooth pulled. "So she did," Mr. Jackson was writing letters to the Grand Duchess Anna Pavlovna, married in 1816 to the hereditary Prince, afterwards King William II. In 1836 King William III. presented Peter the Great's house as a gift to the Emperor Alexander."

"You—you—or write, or—or something, don't you?" she said hopefully. I said I did.

"And your mother was—"

"She looked as if she was suffering, so I said, 'My mother's maiden name was Ralston.'"

"She fairly jumped at this. 'You took the word out of my mouth,' she murmured."

"Well, after that we got on swimmingly," continued the Colonel, helping himself to cheese. "She asked me how Uncle Joshua was. I had never heard of Uncle Joshua, but she had had a good deal to do during the time of the war. 'Oh, then you have seen him recently?' she asked in a surprised way."

"I said I had. 'I didn't know your business would allow you to get so far away as New Orleans,' she gurgled."

"I said I had been ill and went south for my health."

Then she said, 'Aunt Ella's death was very sad, wasn't it?' 'I said it was worse than that, and just to seem sociable, I added that her son must miss her very much.' 'Mrs. Jackson sat up straight. 'Her son,' she exclaimed. 'You mean her daughter, don't you?' 'I said I did. Ordinarily I should have stood my ground, but it wouldn't have been polite to contradict the lady the next time I met her, and, besides, I wasn't in the mood for argument, anyway.' 'Mr. Jackson kept on writing letters. I was just thinking I had done my duty toward Aunt Susan, when Mrs. Jackson roused herself with an effort and said, 'Do you know, I believe that I once kissed you when you were a baby.' 'That settled it. I don't remember just how I got into the hall. I believe I told her I would come again, but that was only one more lie. When I got to the drawing room door it occurred to me that something was missing. Mr. Jackson was holding the door open. I went into the drawing-room, lighted the gas, fished my hat from under the sofa, and turned out the gas again. I couldn't swear that I spoke to Jackson when I went out."

The Colonel regarded his plate thoughtfully a moment. Then he looked up and caught the sympathizing glances of his friends.

"Don't ever do it, boys," he said.—New York Tribune.

New Life for Oil Wells.

The Standard Oil Company to Test an Electrical Contrivance for Thawing Them Out.

Philadelphia Times.

The result of a useful invention, which is just about to be placed on the market, will be to create a new era in the history of oil and to start fresh life into the regions which have flourished in the past, but are now regarded as played out. It will turn the desert regions of the oil sections into bustling towns, and will furnish an enormous supply of petroleum that would be sufficient of itself to do the work of the greater part of the world. The dead wells will become as fountains, and the springs of the deep will give up their wealth in an inexhaustible quantity.

This invention is the work of a Washington gentleman, Mr. Topley W. Young, and consists of an electric heater, which can be lowered into the well. The electricity is generated in large quantities, and is so powerful as to melt the refuse matter, which clogs the pores of the stone, will be melted and run out, thus allowing the fresh upward flow of oil.

To understand the principles upon which this invention is founded, it will be necessary to explain that the theories as to exhaustion of so many wells is that the oil, in passing upward through the stone, has clogged the pores with paraffin in such quantities that the further flow is stopped and the well ceases to produce. Some think that it is because the supply in the earth has given out, but the generally accepted idea is that the oil is still in abundance, and only ceases to flow when the exit is stopped.

The stone through which the oil passes is of a very porous nature, and as the liquid is in a crude state, the thick matter becomes as drags, settling in the rock near the edges of the bottom of the well. It has been common to use torpedoes to shatter the stone at the bottom of the well, thus breaking up the clogged matter, but this is an expensive process.

By the Young method the machine, which is about three feet long and resembles an iron cart, is placed at the bottom of the well, and the electricity turned on so powerfully that it receives just enough volts to produce an intense heat, which melts the metal. The current goes down the wires, and by the peculiar construction of the carbon-padded chambers the intense heat is radiated about into the rock in all directions. Thus the paraffin and other refuse is softened and melted up so that it runs, and when the well is started a fresh start takes place just as strong as it did when the well was first sunk. This rejuvenating of the dry wells of the oil districts of the United States means a great deal of money to the people of Pennsylvania, New York, Kentucky and Indiana.

Many a man who has lost his fortune in the drying of oil wells, would be again able to pump dozens of barrels, hundreds of wells will spring into new life, thousands of dollars will be made from iron mines, and the property, and millions of barrels of oil will be added to the annual production of the country.

The plan made by Mr. Young is in the hands of the Standard Oil Company, and will be thoroughly tested. As that company owns so much oil property, and has so much of the saving of great wealth to them, as well as to the many hundreds of people all over these districts in New York and Pennsylvania.
