

The MASON Reducing Valve

For Steam,
Water or Air.

Is designed to reduce and maintain an even pressure regardless of changes in the initial pressure.

It will automatically reduce boiler pressure for steam heating coils, dry rooms, paper making machinery, slushers, dye kettles, and all places where it is desirable to use a lower pressure than that of the boiler. Any low pressure desired may be obtained by simply turning a key.

They are Reliable and Accurate.

The Johnson Corrugated Steel Bar FOR RE-INFORCED CONCRETE

All official tests and juries have given Corrugated Steel Bars First Place. Additional cost per pound more than other types, yes, but a fraction of one per cent only on total cost of structure. Why take chances with inferior forms of reinforcement when the use of Corrugated Bars insures perfect bonding and permanency of structure?

The Latest Book on the Electric Furnace

Electric Smelting is a subject of increasing importance to Canadian Engineers and this work contains a clear and connected account of the principle on which electric furnaces are constructed, the uses to which they can be put and the more important details of their construction. The articles upon which the book is based appeared in the Canadian Engineer during 1906.

THE ELECTRIC FURNACE ITS EVOLUTION THEORY AND PRACTICE

BY ALFRED STANSFIELD, D. Sc., A. R. S. M.
Professor of Metallurgy, McGill University

208 PAGES. Fully Illustrated

PRICE \$2.00

The evolution of the Electric Furnace from its simplest beginning is as briefly set forth as is consistent with clearness, together with the important facts relating to its theory and practice.

The rapid growth of the Electric Furnace makes it increasingly difficult for the metallurgist to keep in touch with its recent developments. A few years ago it was a scientific curiosity, but now it threatens to rival the Bessemer converter, the open-hearth steel furnace, and even the blast furnace itself.
