MEXICO'S HARD WOODS.

"I was amazed at the almost infinite variety of woods of value to woodworkers that are growing in the forests of tropical Mexico," said a timber expert who recently made a tour of that part of Mexico. "There are several varieties of mahogany, cedar, oak, rosewood, ebony, dyewoods and endless other hard woods with Spanish names, but corresponding to our hickory, cherry and other fine American woods that are now extremely scarce and costly.

"Many of these tropical woods are as strong as iron. While the mahogany, cedar, rosewood and dyewood are well known to us through importations from there, the unknown varieties of woods that are just as valuable are quite as plentiful.

"Among these is one called zapote, which grows to a great size. Although the wood of this tree has peculiarly valuable qualities for lumber, it is seldom used in that way, the tree being valued merely as the producer of chicle, the sap which forms the basis for most chewing gum.

"The wood of the zapote tree is dark red and is easily worked until thoroughly seasoned, when only the finest edged tools will have any effect on it, and a sharp pointed nail is driven into it with difficulty. The fiber of the wood is so dense that the wood sinks in water like iron.

"In prehistoric ruins that abound in these Mexican tropics are timbers and
