

physics, physiology and pharmacology, and zoology. Original research papers are published by these journals in either French or English. (1)

NRC maintains a scientific liaison office in London, England, for the exchange of scientific information. The Council has a scientific exchange agreement with the Soviet Academy of Sciences that provides for visits of scientists lasting from three weeks to nine months; it has also accepted responsibility for exchange of Canadian scientists with France under the Cultural Agreement between the Government of Canada and France. An agreement on scientific exchanges has also been concluded with Brazil.

Canadian Patents and Development Limited, a subsidiary of NRC, patents and licenses new products and processes that come out of research by NRC, other government departments and agencies, and Canadian universities. CPDL initiates and finances the development of many inventions to a stage where it becomes economically possible for private industry to carry them through to production and sale, thus bridging the gap between research and industry.
