tional manner and covered with fill. The depth of the burial would be sufficient to place the line below the normally active permafrost layer present in northern locations. Remotely-controlled surface valves spaced at regular intervals along the line will have the capacity to monitor leaks.

Most of our [Esso] remarks here have been addressed to pipeline systems because we have done most of our work on pipeline systems. (Mr. G. Bezaire, Esso, Issue 17:28, 16-2-1982)
