

## NEW AND OLD PROCESS LINSEED MEAL.

The question is often asked, what is the difference between old and new process Linseed Meal? We will briefly reply. Both are the residue from the manufacture of linseed into oil. In the old process no chemicals whatever are used, the oil being extracted by heat and pressure, leaving the cake pure and unchanged. This cake is then ground into meal. By the new process, the oil is extracted by steeping in naphtha. This chemical then has to be removed, leaving the meal a dry chaffy substance, with not more than 2 or 2½ per cent. of oil retained in it. We guarantee our old process meal to contain not less than 6½ per cent. of oil, which fact alone must be evidence of great difference in value. All meal manufactured by the Niagara Linseed Oil Works guaranteed strictly pure and by the old process only.

### HOW TO FEED OIL MEAL.

#### Milk and Butter Rations.

20	pounds Hay, Corn Fodder and Straw.
4	" Ground Oats.
6	" Wheat Bran.
4	" Oil Meal.

#### Rich Butter Rations.

12	pounds average Meadow or Clover Hay.
3	" Corn or Pea Meal.
3	" Ground Oats.
3	" Wheat Shorts.
4	" Oil Meal.

#### Ration for Fattening Cattle.

6	pounds Hay.
6	" Corn Fodder or Straw.
6	" Wheat Bran.
4	" Pea Meal.
5	" Oil Meal.

In each of the foregoing rations the ground feeds should be mixed together and fed dry. If the bulky articles, such as hay, straw, corn, fodder, etc., could be cut up and moistened, and then it and the grain mixed so much the better.

### ACTUAL RESULTS OF FEEDING OIL MEAL.

Mr. Geo. M. Beeman, Napanee.

NAPANEE, JAN. 31, 1888.

Sir I have fed up five hundred pounds of Linseed Meal purchased from you. I feed half grain and half Linseed Meal at each feed to my horses. I never had horses grow faster or appear in better condition than since feeding the meal I got from you—one horse in particular, I never saw a horse grow like him. Though I am feeding the meal heavier than you advised it does not in the least scour my horses, but keeps them what I consider just right in the bowels. I consider it by far the cheapest and best feed going.

HUGH MILLING.

### LOOK AT THIS—READ CAREFULLY.

A word to Farmers and Stockmen. I honestly can and do recommend Oil Meal to parties raising stock, or as a general food for animals. It is cheaper than grain at present prices, and if more of our stock raisers would make use of it they would find it greatly to their advantage. I use it continually, mixed half and half with either bran and shorts, or ground feed. It is an indispensable thing for brood mares in foal and milch cows, and you can raise calves on it without a particle of milk. It is a natural food for animals, being a grain and containing much more nutriment than other grain, and why not use it when cheaper than other food. Give it a trial, and if your animals do not thrive on it I will forfeit my reputation.

E. MING, V. S.

NAPANEE, Feb. 1st, 1888.

My experience in feeding Oil Meal is that in its use for two weeks where it took fifteen cows at my farm to supply the milk customers I have in Napanee, I can now do so with only two cows and a small amount of grain.
