

HUBER

THE HUBER THRESHER

THE THRESHER with the big Cylinder of heavy Construction. Concave spikes placed so as to give least necessary clearance while allowing grain to pass between and effectually preventing heads going through with the grain. Shaft supported in Self-adjusting boxes. If level of machine is disturbed, the Cylinder is still bound to run true and even.

It will pay you to get full details of the Capacity and Construction of this great machine.

BIGGEST GRAIN SAVER OF ALL THRESHERS.

THE HUBER GASOLINE TRACTOR

The Huber 4-Cylinder Gas Tractor (made in 3 sizes) is specially built for excessive strain and for night and day work of every description, every day all the year round. Greatest power developed on the least fuel - a positive economist on every point. For stationary belt work the wide band pulley placed close to motor enables the engine to be backed into the belt without hand wheel turning. It is the ideal engine for all kinds of traction service. The weight is distributed and draw-bar pull adjusted to secure enormous pulling power, while the drive wheels are high and wide, giving a powerful grip of the ground. For plowing it is a masterpiece of engineering.

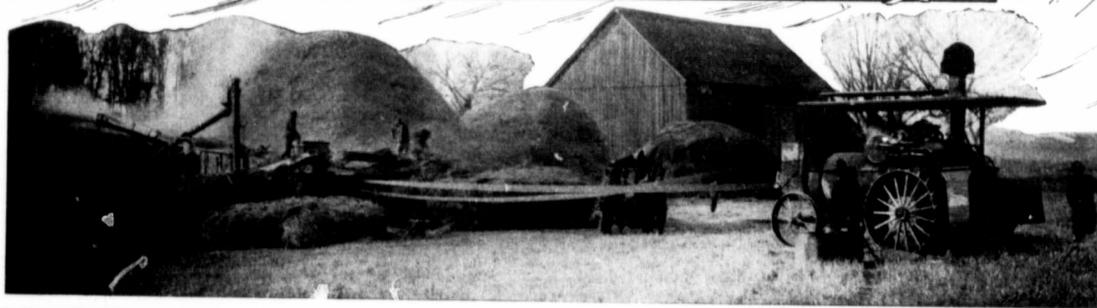

**A POSITIVE WONDER FOR
GENERAL EFFICIENCY,
FUEL ECONOMY,
LONG SERVICE,
SIMPLICITY,
PRICE**
