A remarkable discovery has been made accidentally in Dakota. It is a new fuel, an oil saturated rock inflammable as the best cannel coal. The discovery was made in Mix county, and happened in this wise: Some men were blasting a ledge, when a piece of the rock fell into a fire near by and was quickly in a blaze. A pile of three bushels of the rock was set on fire and burned freely. This petroleum rock is soon to be tested on the Milwaukee R. R. as fuel for locomotives. A piece of the rock about as big as a hickory nut was tried in a retort recently by a Yankton scientist, and found to contain three drops of petroleum. The inflammable property of the shale comes from this oil. It is said that the same material abounds along the Missouri River.

CITRONIC BRONCHITIS.

When Bronchitis take the chronic form the attending symptoms become greatly aggravated, and are associated with many of the very worst symptoms of Phthisis, viz., excessive cough, free expectoration, rapid pulse, night sweats, etc., and finally great debility and emaciation In this stage the diagnosis between this and Tubercular Consumption is sometime very difficult; and it is in this case that Cod Liver Oll, when the sufferers can retain it, is of special advantage; and PUTTNER'S EMULSION OF COL LIVER Oll, can always be easily retained In such a case it is invaluable. Under its use we find the cough cease, expectoration diminish, the pulse regain its regularity and force, night sweats cease, physical strength return, and the emaciation give place to renewed flesh. As this state of things may be a sequence of a cold which has been neglected, it behoves exeryone to be particularly careful of himself while laboring under a cold, no matter how slight it may apparently be. The main thing is to check the disease at its very inception, and the best means by which to attain this end is the early use of PUTTNER'S EMULSION.
