

action, that in fact they are just a few established remedies thrown together without judgment, and often with a positively neutralizing effect on each other. He was therefore induced to put before the public an article that should avoid these errors and prove in every respect reliable. He recollected that some time ago a friend of his gave him a receipt for a flesh wound on his horse, which he said had been found in the pocket of a Surgeon of the United States Army during the Mexican war, and was called the "Soldier's friend." He experimented and improved on the original receipt, and after several years of study and practical application of his own knowledge of horse flesh, he has produced a liniment that is unrivalled, and that in its remarkable effects exceeds even his own sanguine anticipations. This remedy has been in use by himself and his friends for several years, for two of which it has been before the public, and he can safely assert that he has never known or heard of a single case of failure where it has been judiciously and properly used. Testimonials of its virtue could be presented to any extent if it were deemed necessary or expedient, as all who have been benefited are willing to publish its effects; but the proprietor takes into consideration the fact that testimonials can be procured for any medicine, and that they are no test of its worth. He therefore prefers to let the sale of this medicine depend on its own intrinsic merits, satisfied that if tried once it will be tried again and again, and trusting that all who have experienced its beneficial result on their horses or cattle will recommend it to their neighbors and friends.—These facts are candidly presented to the proprietors of live stock, whether farmers, livery stable keepers, stage proprietors, carters, or the public in general, and they may rely with certainty on its curing the following diseases:—Spavin, Windgalls, Callous, Sprains, Bruises, Sandcrack, Cramp, Poll Evil, Flesh Wounds, Lameness, Mange, Swellings, Foundered and Contracted Feet, Scatches, Cracked Heels, Sweeney, Set Fast, Contracted Muscles, Fistulas, Ringbone, etc., and on the human subject it is applied with great success in Sprains, Rheumatism, Corns, Frost Bites, Old Sores, Chapped Hands, Chilblains, etc. Special directions accompany each bottle, which, to place it within the reach of all is retailed at the low charge of a quarter of a dollar.

N. B.—Call for Briggs' Celebrated Black Oil, no other. Prepared by G. C. Briggs, Hamilton, C. W., and New York, U. S.

Sold by all Druggists and Country Merchants generally throughout Canada, and the United States.

DR. E. A. HOPE'S MAGNETIC OINTMENT.

To all afflicted with Rheumatism, Gout Inflammations, Sore Eyes, Sore Lips, Chapped Hands, Burns, Bruises, Sprains, Chilblains, Piles, Ulcerated Sores, Salt Rheum, Scrofula and Scald Head, and in fact all skin diseases, we bring immediate relief.

The skin fulfils an important duty in the human economy, it is the great scavenger of the system. It is a delicate membranous covering overlying the more soft and sensitive parts of the human body, and is pierced by innumerable small openings, called pores. So numerous and so fine are these openings that they cannot be perceived by the naked eye, and it is said that several thousand may be covered by a single grain of sand. Their use is to remove from the system all the waste and injurious matter that is formed, and they do this firstly in the form of vapour called insensibly perspiration, and secondly, under the influence of heat, in the form of the liquid called sweat. The quantity of matter thus carried off through the pores is equal to more than one half of that which is taken into the stomach. Keeping these facts in view, it will easily be seen how important it is that this exhalation should not be obstructed, and that the skin should be kept in a healthy state. In a diseased state of the skin, the pores become filled and obstructed with dirt and impurities, the waste and imperfect matter of the blood is not carried off, but circulates through the system, and hence many diseases are originated. How needful is it then that something should be found to restore the skin to its pristine health, and
