

Great Northern Copper Co. Begins Another Big Drive For Copper.

Operations Begun at Sleepy Cove Upon Arrival of the General Manager from New York—Company Plans to Make Several Shipments During the Season When Ore is Milled.

Mr. Hodder, General Manager of the Great Northern Copper Co., arrived back here a few days after four months absence. The company owns much of the ore in the district and has a concentrating plant capable of handling such capacity. The company has a large body of ore in the mine which is now being milled. The mill is situated on the shore of the lake and is a fine example of modern engineering. The mill is now in full operation and is producing a large quantity of copper ore. The company plans to make several shipments during the season when the ore is milled.

employment evidenced, will be a great blessing to the community, as the capital that will be put in circulation will help make business more healthy as a result of men earning a wage at the mine, and at various other work for the Company.

Easy to Quarry the Ore.

Mr. Hodder plans to begin blasting at the point where most of the quarrying will be done, because much of the outcrop leads, with richer qualities, to the edge of the shore or sea level. Some easy shots are sufficient to shoot down many hundreds of tons of ore over the open cut, which is 60 feet in depth by 40 feet in width, where some of the best shipments were taken from in the early days of the mine.

The shareholders should be very optimistic in their ventures, as no doubt they are, and we know some of them, the older shareholders, must have had good evidence in former years, when 3 per cent. ore was shipped. The famous Tilt Cove copper mine, which turned out such huge profits, gave an average of 3 per cent. for years. Mr. Hodder is hopeful that the production will net the Company more than 3 per cent. as the mineral is unearthened. The pier is quite suitable for an ore boat of any size to lie alongside and it is only a few hundred feet from the mills, which also goes to show the economic side of the undertaking.

Save in Construction.

With the assistance of the present Manager the Company should feel proud, as in former days as well as to-day, he has saved many thousands of dollars to them in the work of constructing the whole plant. Had the Company gone to the expense of employing experts to plan and lay out the many buildings, machinery, boilers, tramways and the dock, that are now in readiness, much of the capital would not have been theirs to use in the mining of the ore, as Mr. Hodder has been so successful in doing, and by his preservation and endurance he has always been fortunate, and it also can be said that no one has been killed, or even crippled while at work in the Great Northern Copper Co.'s premises or in any other of the Company's properties.

Mr. Hodder has also been able at all times to safeguard his creditors and eventually meet the claims of all interested parties. Even in times of depression and money stringency and when copper was low in value, the Company has been able to keep afloat. Having visited the plant and seeing the work, we are enabled to give our readers something of what Twilight is doing in the nature of development.—Twillingate Sun, May 26.

edge of the dash, near the socket into which the hinge rod of the hood fits. These notches must be as close to the edge of the dash as possible, so that when the hood is closed, the notches cannot be seen. When the hood is raised, its lower edge is set in one of the notches, to prevent it from slipping down.—L. B. Robbins, Harwich, Mass.

WEDNESDAY'S PROCEEDINGS.

The Devotional Exercises of the morning session May 30th, were presided over by Miss Cater, a Band Delegate. The interesting minutes of the session, read by Mrs. E. Broughton, will help make business more healthy as a result of men earning a wage at the mine, and at various other work for the Company.

The shareholders should be very optimistic in their ventures, as no doubt they are, and we know some of them, the older shareholders, must have had good evidence in former years, when 3 per cent. ore was shipped. The famous Tilt Cove copper mine, which turned out such huge profits, gave an average of 3 per cent. for years. Mr. Hodder is hopeful that the production will net the Company more than 3 per cent. as the mineral is unearthened. The pier is quite suitable for an ore boat of any size to lie alongside and it is only a few hundred feet from the mills, which also goes to show the economic side of the undertaking.

Save in Construction. With the assistance of the present Manager the Company should feel proud, as in former days as well as to-day, he has saved many thousands of dollars to them in the work of constructing the whole plant. Had the Company gone to the expense of employing experts to plan and lay out the many buildings, machinery, boilers, tramways and the dock, that are now in readiness, much of the capital would not have been theirs to use in the mining of the ore, as Mr. Hodder has been so successful in doing, and by his preservation and endurance he has always been fortunate, and it also can be said that no one has been killed, or even crippled while at work in the Great Northern Copper Co.'s premises or in any other of the Company's properties.

Mr. Hodder has also been able at all times to safeguard his creditors and eventually meet the claims of all interested parties. Even in times of depression and money stringency and when copper was low in value, the Company has been able to keep afloat. Having visited the plant and seeing the work, we are enabled to give our readers something of what Twilight is doing in the nature of development.—Twillingate Sun, May 26.

TO-DAY'S MESSAGES.

A SOVIET REPRISAL.

BERNE, Switzerland, May 31.—Although the Soviet authorities deny acts of revenge against the Swiss residents in Petrograd for the assassination of M. Vorovsky at Lusanne, advices received from some of the Swiss in that country, report that the Communists have organized a regular Pogrom against them. At Odessa the captain of the Swiss colony was killed and others were injured. A number of Swiss have been arrested at Petrograd and stores pillaged.

SIKI WON'T FIGHT AWAY FROM HOME.

PARIS, May 31.—Batling Siki has refused the offer cabled by Tex Rickard of ten thousand dollars for a bout in America with Kid Norfolk, late in July or August. The reason published for the refusal is that Siki is to meet Marcel Nilles in Paris on July 8th, but Siki has confided to friends that he will never fight again outside continental Europe, as he believes he was unjustly treated when he departed from this rule and fought McGuire in Dublin.

DON'T KNOW WHERE THEY'RE GOING BUT—

WINNIPEG, May 31.—Aldert Hohenzollern, son of the ex-Kaiser was in Winnipeg a few days ago, according to a report in the Free Press, which says Aldert and his wife, the former Princess Adelaide of Sachson-Meiningen came to Winnipeg from Vancouver and travelled east as far as Montreal, where they transferred to a New York train. No interviews were given and no intimation was published of their mission, from whence they came or their destination.

ATE BUN CONTAINING GLASS.

TRURO, May 31.—Lillie Boisjoly, a fifteen-year-old girl of Truro is in a critical condition, following the eating of a bun Tuesday evening which is presumed to have contained glass. The girl took violently ill following the eating of a bun and coughed up six pieces of glass throughout the night and three more yesterday. Two physicians in attendance, state that if the girl has coughed up all glass she has a good chance for recovery, but they fear perforation of stomach.

PARTICULARS OF YARMOUTH DROWNING FATALITY.

YARMOUTH, N.S., May 31.—Fears that two more lives would be added to the toll of death at Quinua, near here, when Mrs. Edward Hatfield and her three children were drowned in the swirling waters of the Tuskat River on Tuesday, were banished last night when Mrs. Duncan and her grandchild, missing since they witnessed the tragedy from the river bank, were found in the woods three miles from the scene of the drowning. Mrs. Duncan was one of the two women whom Mrs. Hatfield was crossing the river in rowboat to ferry back home for a visit, when the fatality occurred in mid-stream. The sight of the mother and children in death struggles, while she and others stood helplessly by, proved too much strain upon Mrs. Duncan, who momentarily dazed and mentally unbalanced, wandered away into the woods, taking her little grand-daughter with her. Three bodies have been taken from the stream, and the fourth, that of one of the children, is being searched for.

Petrel-Labrador Expedition.

IS ALL OFF UNTIL JULY NEXT. HALIFAX, (Can. Press)—J. L. Payne, Ottawa, vice-president of the Labrador gold hunting company that is outfitting the steamer "Petrel" for a prospecting voyage to St. Bay, announced on Tuesday, May 22nd, that the sailing would be postponed owing to the unfavorable reports of ice conditions. It would be absolutely useless, he said, for any expedition to attempt operations in Labrador until the middle of July, and for that reason no start will be made. He admitted that this decision constituted a great disappointment to many, since the party and ship were completely prepared to leave during the current week. Speaking of a possible rush to the supposed gold field, Mr. Payne said it would be little less than a tragedy if prospectors ventured to Labrador without first having familiarized themselves with the state of the country and the conditions under which mines would be opened. He advised great prudence and caution, and expressed himself as of the opinion that nothing could be done before August and for that reason the "Petrel's" sailing will be delayed until July.—Sydney Record.

Our Weekly Wit.

PER CAPITA PROSPERITY. Only one American out of every one hundred is rich at fifty, and he isn't unless he finds out how to get along without using much coal. Bowling is twice as hard as shovelling coal into the furnace, and it takes twice as long. But Holmes believes there must be something about bowling that makes it popular. The incoming express is due at 7 p.m. Tuesday's west bound express left Crabb's 6 p.m. The express with the Kyle's mails and passengers left Port aux Basques at 9 a.m. The Carbonar train arrived at 3 p.m.

Fatal Accident.

The death of Mr. Tolson Rendell, of Heart's Content, occurred yesterday morning at the Lunatic Asylum under very sad circumstances. The deceased visited the city about two weeks ago to attend to some business and it was while he was returning to his home from Carbonar to Heart's Content that he met with an accident which brought fatal results. It appears that the deceased was driving home by horse and carriage early Sunday morning last, when he stopped the horse to alight from the carriage, near Victoria Village, and in doing so his foot got caught in the dasher and precipitated him to the ground. In the fall his head came in contact with a large stone, and he was rendered unconscious. The driver, a boy of 14 years rushed to his aid, and having secured assistance from the neighbors in the vicinity, the injured man was removed to the Half-way House, a short distance away, where everything possible was done for him. A few hours later the injured man was brought on to Heart's Content where he was attended by Dr. A. Anderson. Mr. Rendell received a severe head wound in his fall, the bone crushing the brain, later developing into meningitis. The patient hovered between life and death for several days and never regained consciousness up to the time of his death. It was only on Monday morning last that he was removed to the city for treatment but without avail, the final summons came yesterday morning at 6 o'clock. The body was confined and prepared for burial, and went out by the 845 train this morning. Mr. E. J. Warren, a brother-in-law, accompanied the remains. The late Mr. Tolson Rendell was a life long resident of Heart's Content. For a number of years he conducted a successful provision and meat business, and was held in the highest esteem by those who had close dealings with him. His untimely end comes as a great shock to his many friends, and there will be universal sorrow expressed for the grief-stricken family.

Chinese Pirates Get \$60,000 Loot.

SEIZE VESSEL IN MID-OCEAN AND ROB PASSENGERS—DISAPPEAR. HONG KONG, May 16.—European passengers were among those terrorized and robbed when the Chinese steamer Taisun was seized near Swatow Saturday by pirates, who disguised as passengers, overpowered the crew, sailed the ship for nearly twenty-four hours at night without lights, and finally left her Sunday at the mouth of a small creek, transferring to a junk looted valued at \$60,000. The Taisun which was bound from Hong Kong for Shanghai, returned to Hong Kong Sunday afternoon. The chief officer, wounded in the forearm by a pirate was taken to the hospital. Most of the passengers had lost most of the money and personal effects. The vessel's cargo, a valuable one, was not disturbed. The steamer, which registers 2,000 tons, left Hong Kong with more than one hundred passengers. The pirate passengers numbered about 40. When a point near Swatow was reached, the buccaners had spread into all parties as pre-arranged, worked suddenly and systematically. Soon they had the ship at their mercy. They pushed the armory, obtaining all the equipment there. The crew was taken by surprise. The captain and the officers and the European passengers were locked up together in the Captain's cabin, where they were compelled to remain till the pirates left the ship. A large number of Chinese passengers, panic stricken, were herded into the hold after they had been searched and their valuables stolen. The pirates had no difficulty in handling the ship. Steaming all night in complete darkness they reached the small creek that was their rendezvous about 100 miles from Swatow Sunday morning. A junk ship alongside; the loot was lowered into it and the pirates vanished.

Wasps Swayed By Emotion.

Observations Made by Naturalists Prove That They Have Qualities akin to Human Beliefs. A book, "Wasps Studies Afield," by Phil and Nellie Rau (Princeton University Press) maintains, giving instances, that insects—wasps, to be exact—feel and display emotions. The evidences are plausible. A wasp, after regaining her spider following a long search, pounced on it with unmistakable viciousness. When later some middle-class ants approached her burrow she kicked at them angrily and curled her sting menacingly. Another species certainly displayed anger when a spider she was pursuing made one leap and escaped. She grew frantic; she became so excited over her discomfiture that she acted madly, walking, leaping and running about the ground in a frenzy till she tumbled into a mole's hole. Still another wasp, examining broken ground in search for her prey, acted calmly till she arrived at a certain pile of loose earth. Her demeanor instantly changed as she "struck pay dirt." She became greatly excited, nervous and quivering with eagerness.

Hiawatha.

SAULT STE. MARIE, Ont., May—Sault Ste. Marie is to attempt something unusual this summer. Alongside the city is an Ojibway tribe, the original Saulteaux (pronounced Soto) or inhabitants of the Sault. At the celebration at the Sault in August of the 300th anniversary of the discovery of the Sault and Lake Superior, these Ojibways are to produce an elaborate presentation on two afternoons of Longfellow's "Hiawatha." All the actors will be Ojibways and they will speak their parts in their own language. The play will be produced at the river front at the east end of the city. Thirteen years ago a dozen of the relatives of the poet Longfellow visited the Reserve, to see in person the country referred to in the poem. The Sault is in the heart of the Hiawatha country, and the old Indian had never visited the Sault, but had received his information as to the ways of the Ojibways and their legends from an old chief who was temporarily a resident on Long Island where the poet met him. It is interesting to note that the ancient home of the Ojibways according to the "Handbook of the Indians of Canada" issued by the Dominion Government, was Algoma. It is a curious fact that the Sault appears constantly in recorded history for a longer period, and more continuously than any other community in Ontario. For this reason, the Sault Indians, their customs, manner of living, their wars and migrations are pretty faithfully chronicled over a long period of time. Sagard, the Recollet historian, the old French Relations, Nicholas Perrot, Pere Marquette, La Hontan, Galinee and a host of other writers of the 17th century, deal with the Sault and its inhabitants. It is recorded that there were 2,000 people there in 1641, and when St. Lussou proclaimed French sovereignty over the Great Lakes in 1671, the same number of people were assembled there. The Ojibway band on the Gordon River Reserve alongside the Sault, numbers nearly 500, there are 1,300 of the tribe in the district. These still refer to the Sault as Pawting, which means "The Rapids." Champlain's map of 1623 shows eleven cabins there, seven on the Canadian side and four on the American side of the river. The two modern Saults preserve the same proportion of houses and inhabitants.

Volcanic Activity.

OTTAWA, May 23.—"Nothing whatever of the supernatural element remains to mask the normal development of volcanoes or hinder their eventual solution," stated Dr. Arthur L. Day, director of the Geophysical Laboratory at Washington, while delivering the annual popular lecture before the Royal Society of Canada in the Victoria Memorial Museum here tonight. The subject of Mr. Day's address was "Recent Studies of Volcanic Activity." He pointed out that recent researches differed greatly from those of two decades ago. Scientists were no longer satisfied to look upon those magnificent displays with awe rather than understanding, or to regard them as manifestations of supernatural forces. Overwhelming as they often were, the forces were physical forces and the reactions in the interior of the earth were chemical reactions between definite, even if sometimes inaccessible, compounds. At Kilanea and at Lassen Peak in recent years a good deal of information had been gathered about the different compounds, both volatile and non-volatile, which went to make up the molten rock of the earth's interior as well as the temperature and pressures which might prevail within a volcano. As soon as this information became adequate volcanic actions became more or less complicated chemical and physical phenomena which differed in no respect from the more conventional problems of the laboratory, except in scope, he said.

TOOK HIS MEDICINE.

He's left this earth an hour ago. At fifteen minutes after six, it's just because he didn't know The stuff he drank was iodine.

Wallace Silverwear.

Is your Table Silver as good to-day as when you bought it? Have you noticed that at the parts most exposed to wear, the plate has become worn? Do you think this condition of your Silver is in keeping with your idea of a well appointed table? Then why not, when you decide on replacing your old ware, give place to it with the "Wallace" Brand, the Silver that refuses to wear and is guaranteed without time limit. Start with the Tea Spoons and gradually complete your set with the one pattern—there are several for you to choose from and the price is very moderate. Tea Spoons cost \$5.00 for a Dozen.
