

little over two and-a-half millions or nearly 7 per cent. of the whole. It thus ranked fourth only in importance, being over-topped by the estimated value, doubtless too low, of the building material credited to that year.

Previous to 1887 there are no complete and accurate figures of the production of this metal for the whole of Canada, but the quantities and values since that year are given below. They are taken from the report of the Section of Mines of the Geological Survey of Canada.

It will be noticed that, except for 1890, Ontario held first place as a silver producing Province from 1887 to 1891, contributing during those years roughly between 40 and 55 per cent. of the whole. Quebec came second, running, in general, from 10 to 13 per cent. lower than Ontario, whilst British Columbia contributed a small and variable proportion of from about 5 to rather under 20 per cent. from 1887 to 1890, and under 1 per cent. in 1891. Following the period already described, we find Ontario falling away suddenly in 1892 and finally disappearing entirely in 1894, contributing nothing until 1897, and even then a very small amount. Quebec also shows a decrease, until in 1897 it is credited with less than $1\frac{1}{2}$ per cent. of the total, and to British Columbia is practically due all the rest.

It will be noticed that in 1892 the value of the silver output of Canada was at its lowest ebb, amounting to but a little over one-quarter of a million dollars, whilst in 1897 it had risen to nearly three and a third millions dollars worth, increasing
