

5 GEORGE V., A. 1915

Dr. SHUTT: Barnyard manure is a very variable product, as I have explained, but average figures for fresh manure of good quality are, per ton nitrogen 10 pounds, phosphoric acid 6 pounds, and potash 10 pounds. Many samples are poorer; some are richer. For further details on this subject I would refer you to the bulletin on farmyard manure we published some years ago.

Committee adjourned.
