

CHAPTER III. Page 9.

The British farmer's division of his tillage land.—His rotation of crops.—He manures or dresses each tillage division once in three years, this keeps his tillage in excellent condition and his tillage land progressively improves.—He ploughs often this keeps the land free from weeds, —In consequence his crops are abundant.—The mode of applying the produce of his farm to the best advantage.

CHAPTER IV. Page 14.

Arrangement of the habitant's farm in Lower Canada.—He divides almost the whole of his sixty acres into two divisions one for grass another for tillage.—Alternate ploughing and grazing ruins both grass and tillage.—His cattle are half starved by this unhappy rotation.—And the crops of wheat, &c. are bad.—His wood compartment ought to be converted partially into grass as a change for his cattle. The mode of doing this.—It is so managed elsewhere.—First step towards regeneration in farming in Canada
