## THE GRANIT TOWN GREETINGS

### Glad News

Living will be cheaper now!  
Sound the hewag, beat the drum!  
Haven't we said all along  
The millennium would come?  
Pessimists have gloomily  
Prophesied it wouldn't, but  
Now you see how wrong they were—  
Pullman prices have been cut!  
But, hooray! that isn't all;  
We have other cause for joy.  
Living pretty soon will be  
Purest bliss without alloy,  
We are all so happy now,  
From the baby up to me,  
Since the papers told us that  
Meats are cheap in Pluma!  
Now, perhaps, we all can save,  
And put money in the bank,  
Up to now we couldn't for  
The cost of living has been rank,  
Isn't it a wondrous change!  
Joyous news for every one!  
Spread the tidings near and far—  
Salt's dropped thirty cents a ton!—  
Exchange.

### ELMCROFT.

A quiet but pretty wedding took place at Calais on Wednesday March 15th when Miss Alice Beney became the bride of Joseph L. Lecman of Calais, Me. The nuptial knot being tied by the Rev. Mr. Edgerton, they were driven in a coach to the Shore Line when they took the train for Bonny River, a sumptuous supper was awaiting them at the home of the bride's parents Mr. and Mrs. Wm. Beney. The bride looked charming in a dress of grey cloth and grey satin waist, she received her callers in a blue silk. These received many gifts to show the esteem in which the young couple are held. All join in wishing them many years of happiness.

### Opportunity.

Master of human destiny am I, fame, love and fortune on my footsteps wait; cities and fields I walk, I penetrate deserts and seas remote, and passing under love's mart knock unbidden "once" at every gate. Those who follow me reach every state, morals decline, and those who doubt or hesitate, condemn to failure, penury and woe; they seek vain I answer not, I return no more.

John H. Ingalls, U. S. Senr.

### Fertilizers for Potatoes.

- (1) Farm manures should be made the principal source of fertility for potatoes.
- (2) Commercial fertilizers should be used only as a last resort, when farm manures are not available.
- (3) If only enough manure for a partial application is obtainable, and commercial fertilizers are desired in addition, they may be added to the manure, with equal benefit from either as though used alone.
- (4) Potato-growers should not go to large expense for commercial fertilizers without previous experience in their use bearing directly on the law for which they are intended.
- (5) A good formula for a commercial fertilizer for average conditions is as follows: Nitrogen (N), 1 to 2 per cent; phosphoric acid (P2O5), available, 4 to 6 per cent; potash (K2O), 8 to 10 per cent. Sandy soils and early varieties are likely to require more nitrogen than heavy soils, clover sod land, or late varieties.
- (6) An application of 350 to 650 pounds per acre, of a fertilizer made up according to the above formula, is the one most likely to prove profitable.

St. George, N. B.  
Mar. 16, 1911

To Mr. John McDougall,  
On behalf of the Council of the Town of St. George  
Please accept our sincere sympathy in your bereavement. Your father was a valued and efficient officer, as well as an honored citizen of our town. In his capacity as Treasurer, which office he held from incorporation, he gave ample proof of his sterling integrity and kindly disposition. He was a man respected by all, and his exemplary character will long be cherished by the entire community.

Yours Sincerely,

C. H. McGee  
G. A. Craig  
H. McKeezie

## THE BARBER

By E. J. A.

Copyright, 1911, by E. J. A.

When you sit down to read a story, you are usually looking for a new and original plot. You want to be interested, you want to be surprised, you want to be entertained. You want to be taken away from the ordinary and the commonplace, and you want to be brought back to the ordinary and the commonplace with a new and original plot.

Now, perhaps, we all can save, and put money in the bank, up to now we couldn't for the cost of living has been rank, isn't it a wondrous change!

Joyous news for every one! Spread the tidings near and far—Salt's dropped thirty cents a ton!—Exchange.

## Now—and Then

YEARS ago when none of us knew better we took our wheat to the village mill and our good friend the miller ground it for us the best he could.

It wasn't his fault if our wheat was mostly grits or if it was frosted or smutty. He did the best he could with the materials we gave him and the facilities he had for grinding.

The making of flour to-day is not a mere grinding process. The great Ogilvie Flour Mills of to-day are a vast commercial enterprise extending from ocean to ocean.
