

RECOMMENDATIONS

The International Joint Commission, in the light of its conclusions on this inquiry, recommends:

1. That because the "closed system" and the McClusky Canal fish screen cannot with any certainty prevent biota and disease transfers which would cause severe and irreversible damage to the ecosystem and, in particular, to the commercial and sport fisheries in Canada, those portions of the Garrison Diversion Unit which could affect waters flowing into Canada not be built at this time. This is not intended to preclude construction of Lonetree Reservoir, subject to the conditions set forth in Chapter VIII.
2. That, if and when the Governments of Canada and the United States agree that methods have been proven that will eliminate the risk of biota transfer, or if the question of biota transfer is agreed to be no longer a matter of concern, then the construction of that portion of the Garrison Diversion Unit which would affect waters flowing into Canada may be undertaken provided the following conditions are met:
 - (a) Any agreed modifications or other measures required to resolve the inter-basin biota transfer issue are incorporated into the Project.
