The Windsor Stock Feed Cooker.

Every intelligent farmer knows that it pays to cook feed for live stock. It is not the amount that is eaten that fattens; it is the amount that is digested. All grains contain large quantities of starch, and starch is not digestible unportion of the grain eaten raw does not benefit the animal as it should.

OUR WINDSOR COOKER supplies a safe, simple, cheap means of cooking feed. The outside casing or jacket is made iron flue, which protects the steel, supported at the bottom with a heavy wrought iron band. Inside the casing is a cast before it passes into the pipe. In this way the entire outside of the kettle is brought into direct contact with the fire, The fire door is 12 x 15 inches—the largest of any cooker made enabling the use of wood up to 3 ft. in larget.
