

*Pyrameis cardui*, Linn.—Cacouna.

*Lycena pambina*, Edwards.—Two specimens of this rare insect were taken at Cacouna on the 19th of July, one in tolerably good order, the other much beaten. At the same time a larva was taken feeding on a blue vetch, very abundant there (*vicia cracca*), which I strongly suspect to be the larva of this species. Several specimens were secured, but a series of mishaps prevented my rearing any of them. I append a description, with the hope that some entomologist may before long meet with it again.

Length 0.50 in., onisciform.

Head very small, brownish black, drawn within the second segment when at rest.

Body above delicate pink or flesh color, thickly covered with very short fine pink hairs scarcely visible without a magnifying glass, a brownish red dorsal line from third to terminal segments, widest and darkest on anterior segments. Second segment pinkish anteriorly, with a patch of dull green behind just in front of the dark dorsal line on third segment. On each side are eight short brownish red lines, those on third and fourth segments being placed nearly parallel with the dorsal line, those behind extending obliquely down the sides and edged above with dull white. A lateral line of dull white close to under surface extending on each side from third to terminal segments, fainter on anterior segments.

Under surface greenish along the middle bordered with pink, which shades gradually into a pinkish red line, lying close to the white one which forms the boundary of upper surface; feet greenish faintly tipped with brown; prolegs green.

Specimens less than half grown have a decidedly greenish tint, with a dark reddish brown dorsal line; the lateral lines with that close to under surface are of a whitish green with a tinge of yellow; under surface dark green with a brownish red line underlying the greenish white one which borders the upper surface.

Half grown specimens are pinkish with a tint of green, as they grow older they gradually assume the delicate pink of the full grown specimen.

*Polyommatus Americana*, D'urban.—Cacouna.

*Nisoniades persius*, Scud.—Ha Ha Bay.

*Hesperia mystic*, Edwards.—Ha Ha Bay, Cacouna.

*Alypia Langtonii*, Couper.—Cacouna.

*Ctenucha virginica*, Charp.—Ha Ha Bay.

*Spilosoma Virginica*, Fab.—Ha Ha Bay.

*Saturnia polyphemus*, Fab.—Ha Ha Bay.

*Crocota ferruginosa*, Walk.—Cacouna.
