

INTRODUCTION

CONTENTS

This volume covers working papers published in the 51st  
Committee on Chemical Research (CCR) during its 1957 sessions  
from January 1957 to December 1957. The included are  
working papers in the areas of physical chemistry, organic  
chemistry, and inorganic chemistry. The volume  
is designed to provide information and research on the  
of Chemical Research.

Not all subjects covered by the CCR have been  
reported in this volume. Some subjects have been in papers  
given at the CCR but not in the appropriate volume.  
Values for the physical constants (P, D, etc.) given  
of each element are given in the appropriate volume.  
where they are not given elsewhere.

Note that the index is a separate volume. It will be  
available in the order of the CCR.
