Letter from a Forty-Niner

Here is a simple, interesting & sincere letter from a rugged pioneer of '49, who braved the dangers and hardships of the overland trail to California. It should appeal to all catarrh victims. Santa Rosa, Cal., May 5 '08. Booth's Hyomei, Co., Buffalo, N. Y.

Dear Sirs:—I was afflicted with catarrh and tried a number of remedies, but received no relief. I purchased an outfit of Hyomei, and before I had used the bottle I noted a marked relief. I used it for a month or so, and thought I was cured, and stopped it for a year or so. Thought I was getting catarrh again, and started using it again. I use it every morning, and keep myself clear of catarrh. I consider it the best catarrh medicine that is used. I have often recommended it to my friends. I am 81 years old. I came to California in 1819, and of course am not as vigorous as I was 58 years ago. My address is 841 4th Street. Yours truly, W. Mock.

For Immediate Sale—One car of 90,000 good Spruce Lathes. The Pierce Supply Co., Ltd., A Cecil Margeson, Agent, Kentville, N. S.

For Sale—Extra fine Senator Dunlap Strawberry Plants. \$3.00 per 1000. Order early. Radcliffe & Veraker, Chipman Corner.

HORSE NOTES

Care of Horses' Feet

(Hon. A. B. Etter, Amherst). The proper care of horses' feet in one of the greatest problems that confronts the breeder of light harness or heavy horses. The problem however, should be dealt with in a practical manner, and the first principle is to make the feet level and the second to have the horse shod with shoes that fit his feet. To make the foot level, the hoof should be of the same depth on the outside as the inside, and the toe and heel should be of a height so that when the horse is standing on a level floor, with his feet at proper angle to the limbs a line drawn down the front of the leg to the top of the hoof at the hair will strike exactly the centre of the foot, and if extended to the bottom of the foot, two-thirds of the hoof at the front will be to the front of this line and the other third behind. This shows that, if the toe is too high, the line of leg will strike the floor farther back. On the other hand, if the heel is too high the line will strike towards the toe and the leg will have the appearance of going straight into the foot. A well-proportioned foot for a horse of ten hundred pounds' weight is one having a toe three and one-half inches long for the front feet, that the distance from the hair to the front of the foot at the toe, while on the hind feet the length of the toe should be an eighth of an inch less. The hoof generally grows the faster on the outside of the front and on the inside of the hind feet. This defect in the front feet will cause the horse to toe out, striking his knees when going fast and likely to hit his ankles when going slow and in the case of his hind feet being high on the inside will cause them to stand close together and interfere, and if a pacer, the horse will cross-fire when going fast. The remedy for these defects lies largely in having the horse's feet level.

PROPER SHOEING

Perhaps the most important matter in shoeing is to have the feet shod so that the horse will not become lame. Contracted feet are mostly caused by using shoes that are too small. Often a foot is contracted in one quarter only. This is caused by the hoof being higher on the opposite side, and tramping on the lower drives that quarter in. The proper shoeing is to make the shoe flush with all around the foot, and the foot is narrow, make the shoe higher on the inside on both quarters. Begin on the one-third distance from the heel and shape the shoe so that the top side—the side next to the foot—will be higher up into the foot by levelling the inside of the shoe about one-eighth of an inch at the heel and lessening as it comes to the third distance of the shoe as before mentioned. If only one-quarter is contracted, make the shoe so that it will only spread the quarter. When the horse wears a shoe like this the hoof will spread and become wide and round at the heel, which is the natural shape for a horse's foot.
