Dickens' Little Nell and the Marchioness.

Miss Mary Sanders and company, fresh from successful engagements in Montreal and Toronto. Will appear at the Opera Heuse in a new adaptation of Harry P. Mauson's "Old Curlesity Shop" called "Little Nell and the Marchinouse". To make the presentation of this Dickens' play the most complete in all its details that the stage has ever known, all the somery, properties and contunes were, made under the direct supervision of the stage manager, Mr. Wm. Seymour. The previous versions of this book were in a measure panoramic of it and sketchy to a degree, These faults Mr. Mauson has endeavored to avoid, and has sought to weave out of the book and yet present a consecutive and well balanced story, a very difficult matter. Mr. Mauson having had this advantage in making his piay that a religious observance of the original is not expected at this day, so that the author has ted at this day, so that the author he a free hand in developing out of all the material a play which is interesting and dramatic. Those who have seen Mr. Maugon's version of "Old Curiosity Shop" declare he version of "Old Curiosity Shop" declare he has succeeded in Joing this to a remarkable degree. The caste certainly gives promise of an excellent performance, in that it contains such names as Max Figman, P.A. Anderson, John Jack, Charles Stanley, Wm. Seymour, Lillie Eldridge, Anne Caverley and a number of others, who hold high rank. The Montreal and Toronto critics were unanimous in exand Toronto critics were unanimous in ex-

The Sleeping City.

The scenes, characters and incidents daily met with in the varied life of New York are truthfully portrayed in "The Sleeping City" which comes to the Opera House, Wednesday, March 7th.

The plot possesses an intense dramatic interest that is keenly aroused at the start and deepens during each succeeding act. The action is spirited, the climaxes wonderfully effective, the language terse, well chosen and witty. The company contains many well known players. Elaborate scenic effects, especially arranged for this great play, will give the proper stage setting.

Tonight, at 7.3 parade commence parade parad

The Widow Entertains.

Wednesday evening the Real Widow Brown gave a reception in the Royal Opera House. True, owing to the stormy weather, the attendance was not large, but all present spent a delightful evening. Not only did the widow—who by the way is more than passing fair-show herself to be a capital entertai fair—show herself to be a capital entertainer and an accomplished vocalist, but she has surrounded herself with an Al caste that successed in keeping their auditors in one long laugh. The company is an exceedingly well balanced and capable one.

The plot is one of sidesplitting complications, and bewildering situations. Then scattered profusely throughout with specialties of the highest order. The acrobatic and tumbling work was exceptionally fine, was should the widow give another reception

Should the widow give another reception this season it is safe to say she will have to put seats in the spare bedroom to accommo-

Marks Bros. Company.

Notwithstanding the storm last night large audience was present when the cur tain went up on the patriotic drama, "A Soldier's Sweet Heart." The play was full of thrilling scenes which drew out the splendid dramatic powers of the company rticulary giving scope to the remarkable gift of emotional acting possessed by Miss Bell and the side splitting comedy of Tom Marks The specialties alone are enough to commend the company to popular favor Tonight, "The Major's Bride" Saturday Matinee, "East Lynne." THE T. WILLARD READY HOT AIR TREATMENT OF RHEUMATISM.

By DR. BURNS, Chicago.

The treatment of Rheumatism, particularly of the chronic form, is often far from satisfactory, either to the patient or to the physican and up to the present time has left much to be desired. Even in the most favorable cases, when the worst of the disease is past there often remains a tenderness and a stiffness about the articulations which are a incovenience to the patient, if not a source of positive discomfort. The Dry Hot Air Treatment by the T Willard Ready method, above 500 degrees F., applied to the affected part, in cases of long standing Anchylosis, not only produces speedy relief, but produces absolute cure

The knite, with its butchery shall no longer reign,
But water, as first made by God, Man shall know.
When heated with flame, as pure as his name,
Shall disease dissolve, as the sun dissolves snow.
T. WILLARD READY

MOTTO-Heat, scientifically applied has proven a great benefit to mankind.

after using the muscles the pain somewhat diminish a—Lumbago, when the muscles of one of the sides of the region are affected, and alt, not only without discomfort, but with effect safety, as with ordinary care not went the skin should be blistered, the high maperature drying any perspiration as sorbing it.

The following effects can be noticed:

1—Pain, if any has existed, is diminhed.

2—The part treated becomes hoyed each of the back; sides or neck can be subjected to head.

3—Chronic (sub acute), a tricular and tolence or fall:

3—Chronic (sub acute), a tricular and with it similar as with it similar as with it similar as with its similar as the muscles of the pain sequence of the pain sequence of the pain sequence of the sides of the region are affected, and acute present acute, rheumatis is caused by a and recent expectation to either extremity, the muscles of the back; sides or neck can be subjected to head; sides of the pain are filled and somewhat a will be an addition to either extremity, the muscles of the pain and somewhat a will be an addition to either extremity.

2—The part treated becomes hoyodermic, showing dilation of the capillaries—hence.
3—Effusion and deposits in joints, and in fact everywhere else will be absorbed, adhesion broken up—consequently
4—Ankylosis removed, mobility of stiffened joints or limbs restored.
5—Inflammatory conditions relieved, in fact affected parts brought to as normal astage as possible.
6—Certain pothoganic germs necessarily would be annihilated if subjected to such high temperature, therefore the subjection of a tubercular joint or pyemic effection of a tubercular joint or pyemic effection of neorrheal arthritis must be followed by good results.

The therapeutic properties of intensed in high temperature in the affected general way. Antiseptic.

In summing up these tnerapeutic effects of dry hot air (intense and isolated), the reader should bear in mind that they are not merely theoretical deductions, but have been substantiated in actual chemical experience, and observation in many patients.

The question now is in which cases is the treatment suitable. We could answer this in a general way, but believe in so far addition to therapeutics, to mention cach the fact of sond adeposits in the joints of the hands and feet practically deforming them, can have been substantiated in actual chemical experience, and observation in many patients.

The question now is in which cases is the treatment suitable. We could answer this in a general way, but believe in so far addition to therapeutics, to mention cach

addition to therapeutics, to mention each to some tumor within the pulvic cavity or ment. be necessary to prove its rationale.
First of all, the Rheumatic effects must be mentioned.
1—Acute Articular Rheumatism. Whether this disease is due to an infection by germ, to cold or exposure, or to an abnormal condition of the blood or system is not yet definitely decided upon, and makes little difference, as the T. Willard Ready Dry Ho, Air Treatment is concerned.
That much is fact that besides general symptoms, such as fever for instance, one or more of the joints becomes quite red, swollen, painful and sensitive to touch or motion.
Pathology teaches us that the Synoveal membranes of the joints become inflammed, and exude a turbid thin the pulyio cavity or some sumor within the pulyio cavity or lower must be first removed before relief could be made of permanent. In mose cases of primary sciations, however, the in

used the T. Willard Ready Apparatus with intense dry heat say it to be the standard method of treatment of these affections. Unlike formulas and drugs, the only merit of which lies in advertising, you deal with a natural remedial agent, the physiological properties of which are as well known as those of air, and as definite in results as the dissecting knife in opening abscesses or removing tumors.

HEAT, as is well known, has for centuries been recommended as a topical agent for the treatment of localized inflamation, therefore principally in Arthritis, Synovitis, Primary Neutritis, etc., it was administered elitier moist or dry. Practics teaches that heat can be borned comfortably on comparatively high temperature, hence it is also more beneficial. The methods used, hot bricks, hot water bettles, bags containing heated sait, and or heated plates, could be neither regulated nor maintained for any length of time, making renewal of agents necessary, and subjecting the heated parts to exposure to cold.

Lately the T. Williard Ready Hot Air Apparatus has been introduced to the medical profession, and a Sanitarium has been equipped in Stratford, to be known as "The Windermere Dry Hot Air Hospital," for the treatment of all diseases where dry hot air is indicated. The f. Williard Ready Apparatus is so constructed as to isolate the air within the cylinder, to remove all moisture and permit its being heated to only relieve at once but prevent this sad result. The pathology is the same as in acute rheumatism, save that the mischief is caused by a different micro-organism; and recent experiments tend to show that 400 F. are sufficient to kill the gonococcus.

400 F. are sufficient to kill the gonoccous.

8.—Arthritis means simply an inflammation of the joint. The fore acute articular rheumatism is a summatic arthritis, and gonorrheal rhe imatism, correctly speaking, is a gone Aeal arthritis. We mentioned arthritis for he sole purpose of reminding the refer that a blow, violence or fall may also j is duce it—and with it similar symptoms e. in the rheumatic and gonorrheaf for s. Tuberculosis is also a very frequent saulal factor, but as a rule the joint tise i does not become involved until in the ater stages, but primarily the synovial memorane only becomes involved, and then is known as a

9.—Traumatic Synovitis. or

9.—Traumatic Synovitis. or

10.—Tubercular Synovitis. It is hardly
necessary to repeat what we have already
said in regard to the Dry Hot Air Treatment as regards these affections. Only
that much we wish to add, that where
heretofore tubercular joint troubles (synovitis or arthritis) were treated by intraarticular injection of certain antiseptics,
the results, besides the pain, which such
treatment necessarily caused, were far
from satisfactory, while now the inflammatory process is quickly checked and the
bacilli absolutely destroyed; for any tyro
in medicifies knows that even low temperatures of heat are sufficient to kill the bacillus tuberculosis. The value of dry hot air
treatment is perhaps best estabished in
sprains (traumatic synovitis), as it has been
frequently reported that patients who
could not take a step on account of the

stiffness or immobility of the joints, can be successfully treated with dry hot air, if due to rheumatism gononorrheal infection, tuberculosis or traumna, unless there is such extensive destruction of tissue as to make reparation impossible or if the bones forming the joints are grown together. In such cases relief can be expected from osteoplastic operation only. In so-called fibrous anklosis, the dry hot air treatment will befound an excellent adjunct to foreible breaking of the adhesions, prior to and immediately after the operation, when the pains incident to the breaking will be relieved at once and a lighting up of a dormant inflammation prevented.
