

HALL'S IMPROVED HAY CARRIER AND FORK.—This engraving represents my New Reversing Carrier. By pulling down on draft rope it can be changed in a few minutes to pitch hay into opposite mow. It is made from best refined Malleable Iron and Steel, and guaranteed to give satisfaction if properly erected. Hundreds are in operation in all parts of the Dominion, and are giving universal satisfaction. I also make a Carrier for wood track, which is as good, if not better, than any in the market. It is also made from Malleable Iron, and warranted to give satisfaction; can be changed by simply changing end pulleys. This is easily accomplished by using my Patent Pulley Hoister. The pulley can be placed in position in peak of barn without climbing, also lowered again, saving all the trouble of going aloft to change pulleys and Carrier, one set of pulleys being sufficient; no pulling of rope or changing ends, always using one end to draw by. This is a new feature in Hay Carriers. The Common Sense Sheaf Lifter can be furnished if required. Liberal discounts to good agents—no others need apply, as we will not deal with any but good, responsible men. Send for circulars and prices.

Address—**THOS. HALL,**
IROQUOIS, ONT.

LATEST INVENTION!—THE ROSS KNIFE SHARPENER—Patented May 7th, 1886.

This machine was awarded Diplomas at Provincial Exhibition, Guelph; Western Fair, London; and Northern Exhibition, Walkerton, in 1886, and was shown against the Dutton Knife Grinder (the latest invented machine in the States) and Straith's King Knife Sharpener, and came out victorious, with the above results.

We claim this machine to be the best invented, and we challenge anything to equal it. Any person can work it. It grinds two sections at a time, or one if required. It will grind the point without the heel, or the heel without the point, or a gap out. It will grind any length of a section from point to heel without any change after you set it for the length of section you want to grind. You can give different lengths of stroke for different lengths of knives. If worked according to directions, we warrant it to give satisfaction every time, or money refunded. Price, only \$8.00 in Ontario or Quebec, freight paid; \$10.00 in other Provinces. See what the November number of the "Farmer's Advocate" of 1886 says about it. Send for circular giving full description of machine. Order early. All orders by mail promptly attended to.

ASHTON'S FACTORY-FILLED SALT

is the best and purest of all the salts that are made. The only salt that can be used with safety in making butter and cheese. It enhances the value of butter from two to ten cents per pound, and in keeping quality it has no rival. Its perfect solubility makes it a profitable salt for dairymen to use, so much so that Ashton's would be cheap at its present price even if other kinds were given for nothing. There is an actual gain of from one to four percent from using Ashton's; in other words, a clear profit of from \$9 to \$30 for every sack used. We do not ask you to take our word for this. Upon application we will furnish testimonials from well known dairymen. If you read them carefully you will try the salt, and if you try it you will use it and use no other.

DARVILL & CO. S
NEW
PATENT PRESS BRICK MACHINE

The clay is prepared in the usual way, and used much stiffer than in a stock Brick Machine. Will work either strong or quick-sand clay; can be driven either by horse or steam power. The clay is pressed in the moulds, which are connected together, forming a revolving chain of moulds, lubricated with either oil, water or sand—the moulds passing through a tank or trough, which thoroughly lubricates them, so that the bricks leave the moulds perfect and smooth, being pressed on the revolving carrier, which extends any length on the yard. The brick is equal to any re-pressed brick. The bricks are taken from the carrier and put on the aches, requiring no man to sand the moulds, striker-off, or setting on the barrows, and the wheelers,—which is a saving of three or four men. Capacity: No. 1, 8,000; No. 2, 16,000; No. 3 24,000 per day, making a perfect pressed brick, superior to either stock or wire cut brick, which are apt to warp, and are difficult to cut.
