**Lightning Plays No Favorites—Gives No Warning.  
This May Happen to You Any Time. Why Take  
Chances When Protection is Just a Matter of a  
Small Investment in**

**Shinn-Flat**

**LIGHTNING RODS**

Lightning caused a loss, through  
barn fires, last year in Canada of  
over half a million dollars and Gov-  
ernment statistics  
prove that at least  
97% of this ter-  
rible waste could  
have been avoided  
if the barns had  
been protected  
with dependable  
lightning rods.

Shinn-Flat  
Lightning Rods  
permits the elec-  
tricity in the  
ground to gradu-  
ally pass into the

air above, as it is attracted by the  
electricity in the clouds, prevent-  
ing the accumulation of electricity  
in the building which is the cause  
of the lightning stroke. A build-  
ing free from electricity is in no  
danger. That is how Shinn-Flat  
prevents lightning damage.

Not only do Shinn-Flat Copper  
Cable Lightning Rods give you  
protection. They also reduce Fire  
Insurance. Most insurance com-  
panies giving a lower rate on Barns  
and Houses that have Shinn Flat  
Rods.

Shinn-Flat cable will carry a  
36% heavier flash than other  
cables because Shinn-Flat has 36%

more conducting surface than the  
same amount of material woven in  
a round cable.

It is the only Lightning Con-  
ductor in Canada or America  
made in accordance with the latest  
scientific discoveries. Its exclusive  
flat-woven form is endorsed by the  
most eminent authorities in the  
electrical field as being superior.

Professor W. H. Day in his  
new book "Principles and Instal-  
lation of Lighting Rods" gives  
much valuable information that  
every farmer and property holder  
should have. Send coupon below  
and a copy will be mailed to you  
free of charge.
