ST. JOHN'S.Booth Tarrington's
Success "Clarence"

AT THE MAJESTIC TO-DAY.

Miscellaneous and Habel will submit one of the best programmes of their repertoire of songs and violin selections at the Majestic during the first half of this week. By special request they will render "Linger Awhile." The other hits will include items from jazz to grand opera.

In addition to a travelogue showing interesting places, the feature

"Clarence" will be screened. This somewhat extraordinary photoplay is taken from Booth Tarrington's greatest success, and is something new in the film world. This is that the picture is distinctly a comedy, not overburdened with plot, yet at the same time delivering a message that is quite worth while.

Clarence Smith is a soloist, and also he is the only man in the world who ever drove army mules without swearing at them. He comes unostentatiously into the Wheeler household where barking and biting and bickering is of daily, if not hourly,

occurrence, and the family is on the point of breaking up, when he begins his work as a fixer. His quiet and trustful nature manifests itself, and before long he becomes the confidant of every one in the house. It is then that with tact and patience he sets out to build up permanently the crumbling house of cards, and in the end he succeeds most happily.

If a rocking-chair has an unpleasant habit of "travelling," past narrow stripes of velvet along each

Uncommon Industries

In a cottage close to old Whitefriars Glassworks, London, lived a man who was maker of clay pipes to the court of King James I. The clay pipe industry, of course, still exists, though the introduction of briars has robbed it of its former prosperity.

Many old industries, some of them very quaint and long since displaced by modern methods of manufacture, survive in out-of-the-way places. They are carried on locally by the descendants of families who plied their trades for generations.

Perhaps the oldest and queerest of these is the art of the flint knappers of Brandon. About two thousand years ago Brandon was famous for its flint arrow-heads, ploughs, axes and hammers, owing to the fine quality of the flint found in the district.

Flint Foundations.

After the Stone Age the industry waned and only came into prominence again in the days of tinder-boxes, flint-lock guns, and cannons.

To-day, a few men descended from the ancient workers are still carrying on in the manner of their forefathers. One of the uses to which they put their craft is the shaping of flints for the decorations of buildings. It was discovered, not long ago that the bad flakes produced in working the stone could be utilized as foundations for concrete.

Another old family craft which is dying out is the making of quill pens. For the past century most of these pens were made by one family, and now only one old man, who is skilled in the art, survives.

The manufacture of quill pens requires more art and practice than might be expected. The feathers used have to go through a process of "dutching" before they were suitable for shaping into pens.

Bucklebury Bowls.

The long wing feathers of the geese are made up into big bundles and the points are stuck into damp clay. When sufficiently moist they are taken out, one at a time, and held with the end in a cavity in a coal fire. When very hot they are removed and squeezed so that all the pith is squeezed out of them. After being heated again and polished with shark's skin, the quills are ready for cutting, a process which calls for considerable experience and care.

In the country strange industries flourish, though little is known of them by those who buy their products in the shops of the big towns.

At Bucklebury, in Berkshire, is a man who makes wooden bowls from elm with the aid of lathes a hundred years old. He is a very skilful workman and has supplied some of the largest London stores with his wares for the last forty years.

Stain That Helps Science.

Although so many of us carry walking-sticks or umbrellas, probably only a few have heard of walking-stick farms, yet there are several in this country. Forests of small seedling trees are planted and after about four years they become suitable for gluing. When bent handles are required the trees are trained to produce the desired shapes.

In parts of the North of England broom-bristle farms are to be seen. Special "broom-corn" is sown in the early summer and kept manured with a mixture of soot and powdered sheep bones.

Many uncommon industries have sprung up in connection with science. It is solely in the interests of medical science that the smallest of British industries is carried on. This is the preparation of microscopic stains for the use of pathologists.

The stain is made by a purifying process from ordinary commercial dye-stuffs. There can be little money made from it as so small a quantity is used. A pint of stain can be produced from one gramme of dry-stuff, and only one minute drop is used at a time by the pathologist.

The stain is employed to color certain bacilli so that they become distinguishable from others under the microscope. Each type of bacillus is affected in a particular way by the colouring matter in the stain.

Sentenced to Two Years

The prisoner, Patrick Healey, who recently pleaded guilty to an indictment for Bigamy in the Supreme Court, came up for sentence on Friday last. Before passing sentence the Chief Justice observed that several persons referred to by the prisoner in his statement as present during the magisterial proceedings, had been examined upon oath and were unanimous in disproving the prisoner's allegations. The prisoner was then committed to the penitentiary for a period of two years.

Susu in Port

S.S. Susu, Capt. Roberts, arrived from the Fogo Mail Service route yesterday afternoon, bringing the following passengers—Misses G. Barbour, M. Barbour, Norman, King, Taylor; Messrs. Tulk, Osmond, Lander, and 5 in steerage.

WEALTHY CHICAGOANS CONFESS
TO TERRIBLE CRIME.

CHICAGO, May 31.
Robert E. Crowe, State's Attorney, announced early to-day that Nathan E. Leopold, Jr. and Richard Loeb, youthful members of Chicago multi-millionaire colony and post graduates of a local university, had confessed to the kidnapping and murder of thirteen-year-old Robert Franks, millionaire manufacturer. The boys

were going to hold their victim ransom but decided to kill him and hide the body. Fearing the consequences if the kidnapping were covered, they fought off a search by police for nearly two days and confessed, but finally gave in.
