

Results from Studies of Al ³⁺	3-55
Mercury in Fish	3-55
Fisheries Impacts in Canada and the United States	3-56
Potential for Fisheries Impacts in western North America	3-62
Loss of Genetically Unique Fish Stock	3-62
Effects of Acid Precipitation on Birds and Mammals	3-63
Effects on Unique Ecosystems Including Rare and Endangered Species	3-64
Consideration of Evidence for Irreversible Impacts	3-66
Depletion of Buffering Capacity	3-67
Soil Cation and Nutrient Depletion	3-69
Loss of Gene Pools (Unique Ecosystem Components)	3-70
Other Irreversible Effects Not Yet Fully Defined	3-71
ASSESSMENT OF THE SIGNIFICANCE OF ANNUAL, SEASONAL AND EPISODIC ATMOSPHERIC POLLUTANT LOADINGS	3-71
Significance of Loadings and Episodes in the Hydrologic Cycle and Pollutant Effects	3-71
Seasonal and Short-term Characteristics of Rain, Snow, Snowmelt and Pollutant Effects	3-71
Physical Response System	3-71
Biological Response System	3-72
Definition of Loading Thresholds for Aquatic Resource Impacts	3-72
Dickson Relationship	3-72
Henriksen Nomograph	3-74
Cation Denudation Rate (CDR) Model	3-78
Episodic Receptor Dose/Response Relationships	3-80
Implications of the Models	3-82
Illustrative Dose/Response/Time Relationships under Selected Loading Patterns	3-84
AQUATIC AREAS SENSITIVE TO ACIDIC DEPOSITION POSSIBLY RESULTING FROM TRANSBOUNDARY POLLUTION	3-85
Streams/Lakes, United States	3-85
Minnesota, Wisconsin and Michigan	3-85
New England	3-88
Adirondack Region of New York	3-88
