are Coals ey please

all those common too well l, there hiefly to awrence, borders rean the ea-Cow. . of a very nd the may be g clean. h at the of the d thin y good to be ins are readth, he Im-

proper over for Wood, er, but

he Sea-

, and is nay be made made of it, which will not easily admit.

The Sea-Cow is particularly remarkable for her Teeth, two of which rifing one on each Side from the Under-Jaw to the Length and Thickness of a Man's Arm, are very fine

Ivory.

The Pines and Firrs, and in general all the Timber in this Country, excells that of New England. The Cod is also much better in the Winter Season, when he may be taken in the Harbours, which are rarely froze. The Country affords in many Places good Brine for Salt, especially in the Marshes between Chedabouctou and Tetamagouche, by which Means the Fish will be cured at an easier Charge, and this Colony will be able, with proper Industry, to undersell the French, and make themselves Masters of the whole Trade of the Streights.

Let me add to this, that as the Profits of this Trade will finally center in *Great Britain*, by increasing the Consumption of the Woollen Manufactory, they may be assured of receiving all suitable Encouragement from

their Mother-Kingdom.

To conclude, if, besides all that has been said, we consider his Majesty's Goodness in granting the Settlers Possessions by Land sufficient for their Welfare, and his Resolution to secure to them the quiet Enjoyment of
