PROSPECTUS

OF THE SPRING HILL MINING COMPANY INCORPORATED UNDER LAWS OF NOVA SCOTIA, 1870, C. 72. Capital \$400,000, with power to increase to \$1,000,000.

LIABILITY OF SHAREHOLDERS LIMITED TO THE AMOUNT REMAINING UNPAID

SHARES \$50.

2,600 Shares are offered by public subscription. \$5 per share to be paid on application; \$15 per share on allotment, 1st July, 1872; \$15 per share on 1st September, 1872, and \$15 on 1st November, 1872; or the whole may be paid on allotment, with deduction of interest at 6 per cent. per annum, on all payments in anticipation of the date when they become due.

DIRECTORS, &c.

Hon, ALEXANDER MACFARLANE, Senator, Wallace, Nova Scotia, President. Hon. ROBERT BARRY DICKEY, Senator, Amherst, N. S. CHARLES H. M. BLACK, Esq., Merchant, Halifax, N. S.

LT. COL. CHARLES J. STEWART, Amherst, N. S. ALEXANDER ROBB, Esq., Proprietor Amherst Iron Foundry, Amherst, N. S. TREASURER-JAMES S. HICKMAN, Esq., J. S. Hickman & Co., Merchants, Amherst, N. S. SECRETARY-WM. J. MOFFAT, Esq., Barrister, Amherst, N. S.

BANKERS-Bank of Nova Scotia, Amherst Branch; and Bank of New Brunswick, St. John, N. B. OFFICE-Mr. W. J. MOFFATS Office, Amherst, N. S.

The Company have acquired, by purchase, three leases from Government of Nova Scotia to Hon. Alex. Macfarlane, of one square mile each, of the richest coal deposits in Canada, at Spring Hill, Cumberland County, Nova Scotia, renewable until August, 1926 Royalty 10 cents per ton of 2.240 lbs.

Five seams and upwards, of varying thickness from 2½ to 13 feet, are known to exist within these areas, which comprehend (exclusive of a portion of the General Mining Association reserve) nearly all the coal yet discovered in this well known district. Of these, one, known as the 11 feet seam, has been opened, and several hundred tons raised by a slope sunk only 25 feet from the surface, and has been proved by test pits about 1½ mile at an average of 10 feet from the surface, and preserving a thickness of 10 feet for two-thirds of that distance. The slope has lately been carried down to the depth of 95 feet, exhibiting a marked improvement in the quality of the coal, described by Sir Wm. Logan, from specimens near the outcrop, as "an excellent coal, superior to any of this continent yet known." A moderate estimate of the quantity would give as the yield from this seam alone, half a million tons annually during the lease. The larger seam has been exposed by a trial pit within the areas; the smallest of 2½ feet, is believed to contain a valuable gas coal, and it is a fair geological inference that all these beds of coal will be found in their proper position. Thus several distinct colleries may be leased to individuals or companies.

beds of coal will be found in their proper position. Thus several distinct coals be leased to individuals or companies.

A branch railway of 3½ miles has been surveyed, and steps are being taken for its construction to connect the property by a down grade with the Intercolonial Railway, at a point 21 miles from the head of the Bay Fundy and contemplated Bay Verte Canal, and 13 miles from a shipping place at the mouth of Maccan River, half a mile from the Intercolonial, where vessels drawing 13 feet of water may load. Until the opening of the Intercolonial, between Truro and Amherst, next autumn, the coal will be hauled 4 miles to Black Eiger Station.

From the nearness of the outcrop to the surface, and the seams lying on high and descending ground, securing easy drainage, it is considered that these seams may be

descending ground, securing easy drainage, it is considered that these seams may be most economically worked.

The freight of a ton from the head of Bay Fundy to Boston or New York is about 75 cents less than from Pictou or Sydney—of itself a good profit, while the difference to St. John is fully \$1 00.

The Spring Hill coal is well adapted for house, steam and smelting purposes. Situated within 37 miles by rail of the lodes of brown hematite and micaceous iron orc of the richest quality, known as the Acadia iron ore, of Londonderry, it is difficult to assign limits to the quantity of ore likely to be taken to Spring Hill, for smelting by a coal unusually free from sulphur. The large proportion of carbon renders it eminently adapted for manufacturing coke, which, with the coal itself, must be extensively used in the iron and steel works at Londonderry, as well as the Machine shops being erected for the Government railways at Moncton.

The portion of the Intercolonial between Truro and Amherst is now being ballasted with engines driven by Spring Hill coal. It is understood that the line between Truro and Newcastle, if not the whole line to St. John, a distance of 280, miles will shortly be worked in the same way, and the local demand between these points, already large, is steadily increasing.

Vessels bringing flour from the St. Lawrence to St. John, Yarmouth, and other lower ports. through the Bay Verte Canal, when completed, may have return cargoes of coal to Quebec, Montreal or Toronto.

From all these sources of traffic, in addition to the Western part of Nova Scotia, the New England ports and New York, it is assumed that an unlimited market will be

Additional means of shipment will be afforded by the contemplated railway to Parrsboro—a port open at least ten to eleven months in the year—for which the Nova Scotia Legislature have provided large subventions.

The estimated cost per ton for raising, handling, and putting on board ship, say at mouth of Maccan river, is about as follows:

 
 Cost on board...
 \$1.10

 Freight to St. John.
 1.20
 

If Pictou and Sydney coal can be shipped to Boston and New York at paying prices. it cannot fail to be highly remunerative to send a better article from Spring Hill, with an advantage of 75 cents in freight. The local traffic would yield a high rate of

Taking the low average of only 80 cents per ton, inclusive of repairs of machinery, &c., and assuming only 100 000 tons as the annual production at first, we have a gain of 20 per cent. on the capital, which might be much augmented by the rent of other seams, as suggested. From the exceptionally high character of this coal, and the fig. of the coal of

TESTIMONIALS.

Extracts from Reports of Messrs. Woodhouse and Jeffcock, Mining Engineers, London and Derby, G. B., (January 2, 1866)

The Coal Field which we have carefully examined, and which is the subject of this Report, is situate in the county of Cumberland, in the province of Nova Scotia. It is generally described as the "Springhill Coal Field, but in reality it is a part of the great Cumberland Coal Field.

The first or upper seam we found to be a bed of remarkably good goal, presenting a very

is may be considered a very valuable seem of coal. The quality of the coal is exceedingly It may be described as a bituminous coal, but of dense and strong structure. Sout 45 yards below the main seam we proved (by sinking a small shaft) another seam of sout 45 yards below the main seam we proved (by sinking a small shaft) another seam of good workable coal, having the same dip and angle as the main seam. APRIL 30, - - 1872 Now Complete in every Department. The samples of coal examined were taken from the main seam of the Springhil coal field in examination of the external character of this coal shows at to be a bituminous coal of a noderately compact texture, and not inclined to fill to pieces, or slack. Four symples were taken for analysis. I and II. were two averages of the whole box: III. was a picked samples of the best (most compact) coal; and IV was a specimen of the coal showing a shaly texture. The re-68 35,52 59,42 4 (8 The analysis shows this coal to belong to the class known as highly bituminous, or fat caking coals, in character very similar to those of the North of England, known as North Country or Newcastle Hartley Coal. The high rate of volatile to fixed combustible matter should render this coal, in comnon with the Newcastle coals which it resembles, an admirable gas coal, while in the amount of sulphur it falls much below the average of Newcastle coals (which comtain about nine-enths) of one-per cent. as determined by the Admiralty steam trials, therefore the gas obtained from it should be very easily purified. The coke of this coal appears in every way adapted for iron smeltins. (See Canadian Geological Survey Report, 1870.

In forwarding Mr. Hartley's analysis, Sir W. E. Logan writes, 9th June, 1869: "You will observe that it is superior to any of this continent yet known. It is superior, too, to the average of Newcastle coals, and very nearly equal to the best." STABLE AND ROAD Patent Waterproof Knee Dusters, JOHN MURPHY. Linen Fancy Horse Dusters INEN Knee Wrappers and Horse Dusters made to orner—the latter PROPERLY FITTED.

Orders for from goed to best qualities of Harnes, respectfully solicited. junel5 Waterloo Street, St. John. N.B. Emgineer Str. City of St. John. Professor Henry Y. Bind, M. A., in his recent Report of Springhill Coal Field, thus same up: "Thickness of large Springhill seams 13 feet and 10 feet 3 inches. Quality of Springhill seams of the very first class. Distance of these from Parreboro by rail, 20 miles. Known outerop of Springhill main seam, 11 feet, on which operations could be immediately commenced, about 2 miles. miles.

"The main seam, or what is supposed to be the main seam, has been traced for a distance exceeding one mile and a half in a northerly direction, on the Macfarlane areas."

In Professor Selwwyn's, F. G. S., Report laid before Parliament, Session 1872, he thus refers to Mr. Scott Barlow's operations at Springhill: "The evidence, so far as it goes, appears to show that in a distance of about eight hundred yards, horizontal measurement, across the sighs of the measures, there are eight seams of workable thickness, as under, in descending order. No. 1.13 ft. 6 in; No. 3, 2 ft. 4 in; No. 4, 12 ft. 3 in; No. 5, 2 ft. 6 in.; No. 6, a crop, thickness uncertain; No. 7, 4 ft., shaly coal; No. 8, 2 ft.; Total, 42 ft. 7 in." APPLICATIONS FOR SHARES must be made in the annexed form, and forward to the Bankers, or to the Secretary at the Company's Office, where the By-Laws ma Dated 12th June, 1872. FORM OF APPLICATION. To the Directors of the Springhill Mining Company:

Gentlemen. Having paid to the credit of the Company at your Benkers to
the sum of being five dollars per share on my application for
each, of said Company, I request you to allot me that or any less number of shares, and I agree to
accept the same and to pay the sums due thereon in terms of the prospectus, dated 12th June, 1872 Persons wishing to subscribe for Stock in the above Company, or those de siring further information respecting the property, will please apply, by letter or in E. N. SHARP, At No. 23 Prince William Street. Directly over the Office of Robert Marshall, Esq., General Insurance Age St. John, New Newbrunswick. OFFICE HOURS-10 to 11.30 A. M.; AND 2.30 to 4 P. Nursery Rhymes, No. 10. A Blue nose fog was falling fast, As up King street a newsboy passed: He bore a banner by a cord, On which was traced this magic word— CHALYBEATE.

"I am the great cure-all," he said,
"Restore the living, calm the dead—
Cure all diseases of the blood,
And fell complaints nip in the bud"—
CHALYBEATS. "Consumption dread now dormant lies;
The prostrate man will soon arise.
And suffer pains and aches no more,
And Baxter's name live to adore"—
CHALYBEATE. 'Enveloped in a wrapper grand,
Surmounted by a golden band,
The wondrous name of BAXTER rears,
And calms and soothes all anxious fears "CHALYBRATE. The Pharmacopolistic store
Has just received two buttles more
Of amber-colored liquid stuff.
Pronounced by all a "quantum enf"—
CHALYBRATE. On saying this the boy ran off,
And heeded not the jeering seeff
off evil-minded passer-by,
But slowly answered with a sighBut slowly and slowly a sighBut slowly

If the two bottles of this valuable medicine, which is only equalled by Ayer's Sarsaparilla and surpassed by Fellow's Hypophosphites, are not sold within one month from this date, another poem of the above character will positively be inflicted on the afflicted public. They are in the Show Case.
