This very remarkable material from New Brunswick is too well known to all gas engineers in the Eastern States to require any description here. Its almost complete reedom from sulphur and from ash and its very large yield of rich gas, makes it the most highly esteem of all the enriching meterials at present available for gas-making in the eastern portion of the United States. Unlike most limited by impair the value of the coke produced; while it in parts, even in quantities as small as five per cent., a very satisfactory quality to the gas from common coaking coals. It is not well suited to carbonize alone, owing to its highly inflammable nature, in which it resembles asphaltum. But we have obtained some results with it by the hydrocarbon process which are hereafter given.

The following results its gas-producing nowers by the common process. mar 15i sat mon wed To the Electors of Queen's Local Agents Wanted!
