CASE

KEROSENE TRACTORS

FIVE QUESTIONS—FIVE ANSWERS.

Now that the tractor has demonstrated its success as a practical necessity on farms, the vital questions you want answered are these:

- Q. WHO MAKES IT?
A. A concern of long standing in the agricultural field. The J. I. Case T. M. Co. is in its 75th year of doing business. Three quarters of a century experience in understanding farm conditions and farm requirements.
- Q. WHAT IS THEIR REPUTATION?
A. To build a machine for efficient service and one that will stand up for years is a Case standard. To sell something cheap has NEVER or NEVER WILL BE a Case policy. Because of Case buying power and modern manufacturing facilities we build high quality tractors, selling at reasonable prices.
- Q. HOW LONG HAVE THEY MADE TRACTORS?
A. Case built its first gas tractor over 27 years ago. By long and close contact with the internal combustion motor, they have always incorporated the latest and most practical features. Case engineers have always been just a step ahead.
- Q. WILL THE TRACTOR BURN KEROSENE SUCCESSFULLY AND ECONOMICALLY?
A. Case Tractors are GUARANTEED to develop their full rated power on kerosene. Specially designed Case valve-in-head motors burn kerosene with remarkable economy. Case Tractors in all sizes develop a liberal reserve power above their rated horsepower.
- Q. WHAT WORK WILL THE TRACTOR DO?
A. Case Tractors will successfully plow, disc, harrow, seed, harvest, haul, operate threshers, balers, silo filler, feed grinder, in fact they do all draught and belt work. In Case Tractors the belt pulley is mounted on the crank shaft, making it an easy matter to line up to all belt driven machinery.
