LONDON, Aug. 10.—Education is drawn between various classes of the ne of the most vital of the after-the- nation-the aristrocratic class, the war reform crusades which are agitat- middle class, and the democracy. ing the public mind. The Oxford and This country was more fortunate in Cambridge traditions of instilling a that the children of the working little old-school learning in the way of classes, if they had exceptional apti-Latin and Greek, hand in hand with tude, could obtain the secondary

chemists and engineers, if the reform- girls between 12 and 16 years, only 1,100,000 get any education after the This burning topic was discussed age of 13. Of the remaining 1,650, by the House of Lords recently, 000 the great bulk are educated only Lord Haldane, ex-War Minister and for a very short time mostly in eleex-Lord Chancellor, was responsible mentary schools, up to the age of 14, for the discussion. Lord Haldane has Only 250,000 go to proper secondary devoted much of his time for twenty schools, and most of them only for a years to the study of education. He short time. Thus quantity as well as is being denounced just now by the quality is deficient. There are in England and Wales 5,350,000 who, betwen the ages of 16 and 25, get and largely because of that remark no education, only 93,000 have a and all that it was taken to imply, full-time course at some period genthe Scotch jurist and philosopher is erally a very short one, and 390,000 a plain member of the Lords instead a part-time course at evening schools. In England 18,000 and in Scotland Lord Haldane asserted that second- 7,770 enter university institutions

Lacking in Scientific Training. "I hold my countrymen in some tem. It was a defect in the German respects higher than the people of any system that a hard and fast lime was nation I know," said Lord Haldane. but where we have been lacking was the scientific direction of our abundant energy, and in order to obtain hat scientific direction, training and ducation are necessary of a kind we ave not yet known, which other na ions are putting into practice, and vhich, if we ourselves do not learn and supply, we shall find ourselves inevitably left behind. The real difficulty we have to face is that we have never been ready to take up new ideas.

"I am not talking of any particular nation. It is sufficient for me to take two neutral nations-Switzerland and the United States of America. Switzerland puts us to shame in respect of her national system of education, and in the United States there is a keenness and activity about the whole subject which we would do

The application of science, he said. was becoming a necessity, but discouraged because nearly all scholarships in the country were allotted to the professions. There was no use telling manufactures to employ more trained chemists when the J.J. St. John

ountry was not training them. There were only 1,500 trained chemists in he country, while four German firms, which played havoc with British rade, employed 1,000. Expert calculations showed that by proper means the whole of the motor power used in the country could be produced form one-third of the coal actually consumed and the coal wasted would pay the interest after the war on \$2,500,-000,000. Great progress has been made, however by the establishment of ten new teaching universities the United Kingdom.

One striking thing which fills me with hope," said Lord Haldane, "is ed to the necessity of action. Every where we see the most magnificent public spirit. People are ready not only to contribute their money and pay taxes, but the sons and daughters of all classes are ready to throw their energies and abilities into the production of things necessary to insure victory. That spirit is going to stay and is going to influence us profoundly, by those who come back from the

Lord Cromer believed that the nighest authorities on the humanites and on science were agreed that they should arrive at some fair comprom-"The total moral collapse of Germany" he considered one of the events recorded in history.

'Side by side with a great advance in material prosperity and scientific knowledge," he said, "there has been a vast deterioration of character. cannot help feeling that one of causes of that deterioration is that the atmosphere created by humanistic study has lost its hold upon German public opinion. The whole national mind of Germany has appar-

"Nothing struck me so forcibly when I was in America some years ago

was vastly superior to that of the men. All the young American men from sixteen and seventeen upward seemed to be thinking of nothing but of turning the almighty dollar. Since that time I believe a considerable change has come over American thought. The greatest thinkers in America have become alive to the danger of materializing the minds of the nation, and the result is that Harvard and other universities are year by year turning out an increasing store of invaluable works on classical literature."

Viscount Bryce thought Lord Haldane had drawn too dark a picture of the English system of education, and believed the English universities performed the function of teaching the people to think as well as any in the world, although they were capable of improvement in some ways The extraordinary efficiency Germany had shown was largely due to the German habit of obedience.

"If we were to sacrifice our independence and individuality of the efficient organization and acquire the habits of submission and obedience which are ground deeply into the German nature we should make a bad exchange," he said. The business community in Great Britain, unlike the business community in America and Germany, did not appreciate sufficiently the important effects the application of science might have upon their businesses."

Experience of French Aeronaut in Engagement With Eenmy— Death of Companion—Circumstances Surrounding Loss of French Aviator Terline

PARIS, Aug. 5.—Sergt. Charles Rone of the companions of Aviator De Terline, who was killed July 27 while bringing down his third German aeroplane, thus describes the death of the French aviator:

"De Terline and three others of us, Lieut. B .---, Sergt. D---, and myself, took the air with the object of stopping the morning reconnaissance of a German aeroplane. We met about 14 miles from our lines at

"De Terline and Sergt. D--- engaged him first, being on about the same level. The German tried to fly in spirals and so escape. I was a little above him and dived so as to get below and to his rear. I opened

"It was then the accident occurred which deceived De Terline. Sergt D-, not having seen me, came up at full speed on my left. I saw him coming, but it was too late to avoid rying away part of the balancing planes of his own machine. We both plunged down giddily. De Terline seeing us falling, thought we had been brought down by the enemy, and wished to avenge us at any price. He swooped upon his adversary at full speed, crashed into him and fell with

him to the ground. "As for me, I managed, how I don' know, to stop the engine and the machine gun, which was still firing All the incidents of my childhood passed before me in a flash as I dropped from 12,000 feet to 2,000 feet hanging under the motor and merely held by the strap which attached me to the seat. Then I managed to pu He feared the same development in over the lever which before had rethis country if sufficient attention sisted all my efforts, and the machine righted, coming down slowly within
