BASEBALL IN THE EAST.

How the Diamond Game Prospers in Ot-tawa, Montreal and Faruham.

How the Diamond Game Prospers in Ottawa, Montreal and Faraham.
Eastern Canada baseball men have just closed a most successful season and the Farnhams have been declared champions. The league was regularly organized with Ottawa, Farnham and two Montreal clubs. The contests were all keen and the quality of baseball put up of the first order. Besides the attend ance has been most gratifying to the league promoters. In Farnham of course it is the enture of the game organe of games. At Ottawa and Montreal it draws second only to lacrosse. A peculiar feature of the game in the east is the enturiant displayed over it by the French-Canadians, Belcourt, the Montreal twirler, being the best in the league, and a pitcher who would compare favorably with the western cracks. On Saturday a benefit game between picked sides takes place in Montreal for charity, when the Spalding permant will be unfurled with due ceremony. The standing at the close was as follows:
Teams. Won. Lost. Per cent.

Corbett and Fitzsimmons Met and Talked the Matter Over. New York, Oct. 11. - For the first time

since the present negotiations between Corbett and Fitzsimmons opened these two gladiators faced eath other in The Herald office this morning. Fitz and his manager, Capt. Glori, were first to arrive. Corbett

came in 15 minutes later. He wore a white

canc in 15 minutes later. He wore a white sweater under his coat, and seemed to feel cool and comfortable. Fitz sat at a table in the library when Corbett entered, and the champloi wont over and took a seat facing the great middloweight, and said: "How are you Fitz?" The salutation was retureed, and then Corbett said he sup-posed they were there to make a match. Fitz called his manager, Glori, to the chair, stating that he was his spokesman. Corbett askea Giori to show the color of his money, and the captain displayed \$1000 to bind a match. Corbett then snowed a roll of \$10,-000 and told Glori to cover it when he pleased, but there would be no fight until after July 1, as he would not cancel pro-fitable iteatrical engagements. This was a disappointment, but Fitz and Glori agreed and the work of drawing up articles was begun.

CHASE'S CHAPTER **COLD WEATHER STORAGE**

THE WINTER CARE OF FRUITS AND VEGETABLES. Advantages of Dry Bins-The Importance of Sorting Apples, Potatoes and the Like Before Placing Them in Their Places of Shelter. After making a crop, and expending large sums for labor in the duty of har vesting it, the next most important matter is to secure the crop for use in winter and to protect it from injury by

in winter from the effects of frost, and farmers find it more difficult to store certain crops, such as turnips, beets, carrots, apples and potatoes, than to harvest them. Better prices are obtain-ed near the end of winter for such com-modities, and it will pay to make full preparations to keep such crops—especi-ally apples and potatoes—in sound con-dition for market, as they can be ship-ped at a time when there is but little other work to do.

SHELTER NECESSARY.

SHELTEB NECESSARY. Dampness affects vegetables and fruits, and even during periods of ex-treme coid apples and potatoes will keep in good condition if they are in a very dry place. Cellars are not always dry, owing to the liability of moisture ascend-ing from below the floor. It will not serve the purpose to have a storehouse too warm, as heat is not beneficial in the winter to articles that should be kept near the freezing point. The first thing to provide, however, is shelter, such as a shed that is somewhat open or well ventilated, but which will not per-mit moisture to enter. The next point is to guard against sudden freezing or thawing of the articles. Any method that will keep them at about forty de-grees, or just above the freezing point. Will be of advantage, but should they happen to freeze, then the object should be to prevent sudden thawing, which is sure to prove injurious. STORING AND PACKING. The Biegele Railroad Will Soon Have s such as a shed that in some what open or well ventilated, but which will not per-mit moisture to enter. The next point is to guard against sudden freezing of thawing of the articles. Any method that will keep them at about forty de-grees, or just above the freezing point. Will be of advantage, but should they happen to freeze, then the object should be to prevent sudden thawing, which is sure to prove injurious. STORING AND PACKING. The Biegele Railroad Will Soon Have Sort Strain of speed and safety the weight of trains has always had to be greatly in-

The provide determine of the de sure to prove injurious. STORING AND PACKING. Such articles as turnips, carrots, beets, and parsnips can be stored under mounds outside, but they become sealed un with frost, and are not always con-venient for use. It has been found that when all imperfect or injured roots are discarded, and those that are sound are packed in bins, with dw, clean dirt, or sand used for filling the interstices been tween them, allowing a layer of dirt and a layer of roots, they will keep in good condition in a cool place in a dry location; and potatoes have dition when and been accomplishing an hour and ap-pear to be accomplishing wonders. Hitherto in order to secure the maxi-mum of speed and safety the weight of trains has always had to be greatly in-reased. When everything possible has been accomplished a train propelled by steam which can go from New York to the New York Contral in twenty-four hours is considered a mar-rel, while a speed of fifty miles an hour, including numerous stoppages, is count-ed very good time. It is claimed that on the bicycle railroad a mile a minute, including stops, will be a very low rate of speed, while an express train will be able to make 100 miles an hour and ap-pear to be accomplishing wonders. TEX IT AND BE CONVINCED.

1. Dr. Chase's Kidney-Liver Pills are ombination of valuable medicines in conce **DE HASES**

vesting it, the next most important matter is to secure the crop for use in winter and to protect it from injury by frost, or loss from dampness or sudden changes of temperature. It is not the freezing of vegetables or fruits that leads them to quickly decay, but the sudden rise of temperature, which causes them to thaw too quickly. The contraction and expansion of heat and cold affects all substances, and the greater the heat or cold, the more injury is done. There is annually a large loss in winter from the effects of frost, and farmers find it more difficult to store

A POSITIVE CURE. Practical Test in New York. M. V. Lubon's Specific No.8

Women suffer unspeakable tortures from Women suffer unspeakable tortures from muscular weakness, caused by impaired nerves and poor blood. Uric Kidney acid poison, unsuspected, weakens the nerves and *poisons* the blood, By and by, if the Kidneys do not properly purify the blood, then comes pro-lapsus, retroversion, etc. Blood 75 per cent. pure is not a nourisher—it is a death breeder.
