position, frequently cause two, three, or even more days difference, between the epochs of the same event in trees or plants of the same species, very near one another. It will generally be found that these differences are constant. An early and a late specimen should be selected. There is also a considerable interval between the opening of the first flowers on shrubs-like the Lilae, Almond, &c,-and any general display of blossom-both periods should be observed. It should be added, when the flowering is completely over. Again, it is not altogether easy to decide, exactly, when leaves are to be considered fully expanded: the observer should note the date at which it can be first asserted doubtfully, and when it is past a doubt. Remarking also the condition of the weather, which may be supposed to hasten or retard the phenomena. Such as a prevalence of fine or cold days, about the time each is expected-warm or cold rainshigh winds, and so on. Lastly, no observer can be certain that his observation is the first that might have been made in the neighbourhood, and a considerable number of independent records must be consulted to fix the epochs exactly.

Canadian Institute.

FIFTEENTH ORDINARY MEETING.

ANNUAL CONVERSAZIONÈ.

The very gratifying nature of the proceedings at the Annual Conversazione of the Institute, held in the Hall of the Legislative Assembly, on Saturday, April 2nd, induces us to adopt a method of recording them, which savours less of originality than of respectful submission to the opinions of the Press, as shown in the very flattering descriptions which we beg leave to subjoin:

(From the North American.)

"On Saturday evening the most interesting, Literary, Scientific, and Pleasurable meeting ever witnessed in Toronto, was held in the Legislative Assembly Hall.—It was the Annual Conversazione of the Canadian Institute, and some 300 gentlemen, including all the friends of Literature and Science in the City—from the Bishop downwards—graced the very pleasing scene. The Council of the Institute had made great preparations to render oblivious all previous similar efforts. The Hall was tastefully
