E. NORTH'S PORTLAND CEMENT, CONCRETE, STONE CULVERT and SEWER PIPES are made from materials that improve with age—in the ground and in the water. These pipes extract the minerals from the water and the gases from the air, closing the pores of the pipe and becoming more dense, the color changing to that of iron, and ringing like metal, and when properly made and set will resist the action of the frost. The longer they remain in the ground the greater their strength becomes, eventually becoming as hard as stone, and are practically indestructible. They are considered by the leading men of Western Ontario to be superior to anything now in the market for culvert or sewer purposes. The townships using them find their work finished as they go, the work done being permanent. These Concrete Stone Pipes when properly made and placed solid to the invert of the pipes with a solid road-bed over them are there for all time, as age only improves them. There is no danger of the weight of earth above them, or the weight of steam rollers, threshers, or stone-crushers passing over the culvert, breaking through, as these pipes do not perish in the ground, or in the water, or between the air and water, or by frost or water passing through them. All these conditions are favorable to their growth in strength, as petrification is going on for a number of years and makes them as hard as stone. The municipalities adopting these pipes, and placing them properly, are working upon permanent lines, which is true economy, doing work only once, besides being a good asset and relieving the municipality from law costs arising from accidents caused by building culverts with wood or other perishable material, and as long as the municipalities work upon the most expensive, shoddy lines, the ratepayers will always have their hands in their pockets, and never out of a job.

AT THE WESTERN FAIR, 1892. THE CONCRETE, CULVERT AND SEWER PIPE EXHIBIT WAS AWARDED SILVER MEDAL.
