Alconsult International Ltd. offers a complete range of consulting and training services to the upstream and downstream resource industry specializing in oil and gas exploration, exploitation, transportation, processing, environmental issues and safety. The focus is on new and emerging technologies and innovative management strategies so necessary to compete today emphasizing reservoir definition, drainage strategy, EOR and sound environmental and safe practices.

The Alconsult core team of 50 management and technical specialists is supported by a network of more than 500 independent consultants and associated organizations available for individual or integrated team projects. These specialists, drawing on a broad range of experience and language capabilities offer the best expertise available from the Canadian petroleum industry.

Alconsult has served the industry in more than 45 countries on projects including reservoir and operations engineering, geology, geophysics and geochemistry, drilling planning, management and supervision, project economics, computer applications, basin analysis, reservoir management, environmental impact assessment and guidelines, management consulting, organizational development, training and database needs as well as offering wide selection of training courses for a formal classroom setting or on-the-job. With its diversified skills and worldwide experience including that from African projects, the Alconsult management, technical, training and support team provides individual or integrated consulting and training services tailored to client needs.

Mr. Robert Farquharson
Chairman of the Board
