or other power, or to the hand, as may best suit the interest or convenience of persons needing the ar-fiele. Two sizes are manufactured : a large one, calcu-lated for power; and a smaller, designed for the hand. They are entirely different from any Corn Sheller heretofore known, and being contracted with great simplicity and durability, are not hable to get out of repair—an important consideration. The large machine, driven with power, is capable of shelling, in a superior manner, 200 bushels in a day, acting on twelse ears at once. It is only ne-cessary to keep the hopper supplied, but of no con-sequence how promiscously the ears are thrown in, as it feeds itself with regularity and precision. Thus one man may easily attend several machines : and in case the corn is deposited in an upper loft, and the sheller on a lower floor, with a feeding trough of proper dimensions, it night run for hours without any stention. The machine is compact, occupies but small space, and requires but lytte power. The same invited to, and no doubt will, ex-amine for themselves. The prices are listed at the lowest rate, \$50 for the large, and \$20 for the small sheller, the inventor relying on extensive sales for a fair remuneration. Letter desiring information may be addressed, (post paid), to J. MAXWELL, Machingist and Drafsman. \$50 flowery, New York. TFJ.
