30	SUN.	2nd Sunday after Easter.	4 53	7 1	11 57	10 24

You may go on putting up and preparing frames during this month. your melons and cucumbers, for general crop, about the 10th, and transplant them about the 18th of next month into frames in the open ground. early peas, radishes, onions, carrots, and winter cabbages. Cut all up shoots from gooseberry and currant bushes before the sap rises. Transplant fruit trees and other plants, and proceed with your pruning. Give your green-house, and water more freely; syringing is necessary as the increases. This is the best season for propagating, by cuttings from green-house plants. Divide and plant the roots of any hardy herbaceous plants that are too large. Plant out any half-hardy annuals that are ready, or, if your soil is stiff, put them, three or four in a pot, and keep them in a frame.
