Work the Hook Slowly to Recall the Tele- phone Operator

A small signal lamp flashes in front of the telephone operator when you work your receiver hook slowly up and down to attract her attention. A quick rattling of the hook does not operate the lamp.

The filament of an incandescent light will glow for a fraction of a second after you turn the switch. Give the switch two turns, rapidly, and the light seems to burn without an interruption.

So with the switchboard signal lamp. It operates when—and only when—the receiver hook is worked slowly.
