LOST FROM TITANIC.

Some of the points establish science and confirmed by practice are That legume bacteria gives us nitro gen from an inexhaustible supply; that these bacteria do not thrive in acid soils, and that such soils are sweetened by limestone, which is also in inexhaustible supply. It is a matter of common knowledge that legume may be grown on any soil that is sweetened and contains sufficient mineral elements of plant food. Another truth of science is that one product of crop residues and other vegetable matter is humus, and that humus in the soil is the best means of securing some control over what are called the uncontrollable factors in crop production, heat and mois ture

The leguminous crops, such as clover and alfalfa, are not equal to grasses as soil protectors, but are superior to grasses as soil fertilizers, since they increase the total available supply of nitrogen in the soil. This is due to the action of bacteria which are found on action of bacteria which are found on the roots of leguminous plants, and which take free nitrogen from the air in the soil and make it available for the use of plants. Moreover, perennial legumes, such as clover and alfalfa, are very deep feeders and take a part of the mineral elements of their food from the soil below the depth of the feeding ground of ordinary crops. It is best never to feed hogs on the ground it is no more natural for a hog-

ground. It is no more natural for a hog to pick his feed up out of the dirt and mud than for any other animal to do so, although circumstances have in many cases forced him to do so. Have floors on which to feed hogs, and not only will you save food by using them, but they will appreciate their rations much more.

It requires four pounds of kainit to contain as much potash as one pound of muriate of potash. The freight and cost of haufing to the farm and the handling are, therefore, nearly four times as much on the kainit as on the times as much on the kainit as on the muriate, per pound of actual potash. A pound of potash in muriate will usually cost just a little more than a pound of potash in kainit; but if the distance from the seaport is considerable or if the haul from the station to the farm is not short the greater cost of getting kainit to the farm will mach paper they halp believe the slightly higher more than balance the slightly higher price of the potash in muriate at the scaport. Use muriate of potash and

freight charges and cost of handling.
One of our enterprising dairymen sent a bottle of milk to Paris at the time of the exposition. It made the journey over and back, a trip of days, and was still sweet. There was

Prof. C. O. Florg, of the Rhod - Island Experimental Emapon, says that "100 much bran, outs, and especially buck-mical, would have a tendency to produce mind brain, dats, and especially blocks, which very high cobored rolks. Confinered with very high cobored rolks. Confinered with very high cobored rolks. Confinered with very high rolks, and when seen fowls are given their freedom, plenty of green fords are given their freedom, plenty of green fords are given their freedom, plenty of green fords and change in great days, so as to be quite noticeable. Some varieties of parks anticharge in your account of the rolks and change in great days, so as to be quite noticeable. Some varieties of parks anticharge and the second ergs are more esteemed for their theor quality than white shelled ergs and fremently bring a bisner price in the other of the yolk may not be due to be single item of food or confinement. Evolves are ogreed that legions and other Mediterranean breeds, and a richer diet consisting of considerable cornain with much more corn than the As arts and American breeds, and a richer diet consisting of considerable cornain diet of the point of green food and range would no doubt give eggs from the Mediterranean breeds richer policy in the food and plenty of range would probably prove an antitote for white yolks.

THE DANGER OF INDIVIDUAL OVERTHER. ERPRODUCTION.

ERPRODUCTION.

Naturally, poultry farmers are smoltons. They want to get all the good out of home possible. They have installed true mest and are breding from only such hens as size by recognis. First they arrived at the 30 egg strain, and now they want to make it the eggs more. Frofiftency, counted with standard, is a worthy object to work for, but profiftency should never be encouraged when it is known to jeopardize hardiness.

ifficacy should never be encouraged when it is known to jeopardize hardiness.

When the aim is to establish a 2%-est strain—that is, have the flock average strain—that is, have the flock average that number of eags in twelve monthana number of eags in twelve monthana number of ladvidual layers will be compelled to lay as many as 2% eags, or even more, to make up for those which have not reached the 2% mark.

Of late we notice a tendency to go still higher, some advocating a 2%-eag strain. That would make it ameet necessary to have some hens lay 2% eags in one year. What will be the outcome if all this high speed? It will mean a future generation of weak stock. If all the energies are spent in one direction; what will there be left for stamma?

It is fur safer to work for 150 eggs a verar as an average than to go higher.

It is possible for hens properly bred and cared for, to maintain god health and view while aiming at 150 as an average.

Now if the utility men are going to sacrifice everything to secure greater laying, they will not only inbreed, but will destroy the breeds entirely, doing probably more damage than did the fancism of a score of years ago.

Cellingweed says there is no animal mer, to 20-y He was 48.

compact, so full of power and force, as an egg.
POULTRY IN THE COUNTRY'S AF-

POULTRY IN THE COUNTRY'S AFFAIRS.

Alone the hen sems unimportant in the affairs of country and town, but colectively she fooms large in the public weifare. According to the United States Census our fowi population in 1919 was 25.88,696. This sum does not include the poultry and eggs sold by the producers or what was consumed by them. The value of the steck on hand, however, was \$5.00,000 more than the gold and silver produced in the United States that year. In last seasons dry weather poultr's safely tided many farmers over the financial difficulties caused by short crops. If more of our people would place larger trust in and give more attention to the ben and her next of kin they would find themselves in closer touch with good living and on more intimate terms, with prosperity. The hen should not be neglected; if given the same care and thought as the other farm stock she would prove the most profitable. As it is, she is often entitled to that distinction.—Country Gentlemen.

HOW TO MARKET MY EGGS.

HOW TO MARKET MY EGGS. HOW TO MARKET MY EGGS.

Knowing that many people in town fremi it difficult to procure fresh eggs, even from farmers, I began by stamping my name and the day, month and year that the egg was gathered from the nest upon the first eggs I sold by means of small, inexpensive rubber stamps. More-

that the egr was gathered from the hest upon the first egs I sold by means of small, inexpensive rubber stamps. Moreover, this was also the day it was half, for I gathered my eggs at least twice a day.

The work of stamping them took considerable time as well as marred the looks of the pure white shell, so after a few months I purchased pasteboard cartons holding one dozen eggs each, having my name, a place for stamping the date they weer laid and gathered, the monthly range of prices, and a brief advirtisement on the lid. These cartons cost me about three-fourths of a cent apiece delivered and I allow half a cent each for all that my customers return to ane empty. Few are returned, however, for I do not encourage the practice. Parts of this posteboard division are often missian, and the dating stamp must be rumoved before the carton can be used again.

I have made it a practice from the first to price my gazs at the beginning of each month and to maintain that price throughout the month, regardless of whether the general egg market goes up or down in price. It was much easier to self eggs to private instances the second year tight it was the first. It soemed that many of them had been footed by various persons selling them bad eggs so that it was much border for a stranger to establish an egg route.

I deliver my eggs weekly. I could do it more frequently but there seems to be no demand for them any fresher. Every ear is energed a week ahead, while during the following formula is not a condi-

PEED FOR EGGS. The following formula is not a condi-ment or so-called "food" in any sense, it is simply a fairly well-balanced ra-tion, to be field dry, in a self-feeder, and to be kept in reach of the heas at all

BRADSTREETS TRADE REVFIW.

Montreal's reports to Bradstreet's say trade has shown little change during the past week. Spring trade has been rather more active and retailers report an inabout a pan and a hart to teach the second of the second and the house is dry, tably part, and not evergroused, this seed will subside promise egg production. Overgrounding is the rock on which many pontarinen sink. It is not possible to cause two chicks to he where one was before, sed still be successful.

Than NEVER.

er has helped the movement of spring has and trade generally shows a better one than was the case a week ago. Cal-

lections are fair to good.

Winnipeg reports say business there and taronglout the west is in an extremely satisfactory condition for this time of the year. The demand for assuey is active and rates are firm.

breaking up of the country roads has interfered with wholesale basiness dur-

CENSUS OF DAIRY INDUSTRIES OF CANADA, 1911.

Ottawa, March, 1912 .- The census and statistics bulletin for March, issued to-day, gives the records of butter, cheese and condensed milk as collected at the census of last year. There were 3,628 factories in operation in 1910. The quantities of butter made in the year quantities of butter made in the year was 59,875,097 pounds, having a value of \$15,682,564. This is 23,818,358 pounds more than in 1900, an dthe value is more by \$8,441,592. The quantity of cheese is 231,012,798 pounds, which is more than at the previous census fy 10.179,529 pounds, but the value is less by \$600,776. The total value of butter, cheese and condensed milk in 1910 was \$39,143,089, and in 1900 it was \$23,751. \$39,143,089, and in 1900 it was \$29,731,-922, being an increase of \$9,411,137 in ten years.

Taking butter alone, the value of the factory products was \$7,240,572 in 1900 and \$15,682,564 in 1910, and the value of cheese alone was \$21.890,432 in 1970 and \$21.620,654 in 1910. The average price of factory theese was 20 cents per pound and of chaese, 10 cents per pound, whilst in 1910 the average price of outter was 26.2 cents per pound, and of cheese caly

9 cents per pound.

A comparison of the quantities and values of the production of lutter and cheese is given in the following tables by provinces for the census years 1901 and 1911 for the preceding years respec-

tively.

The increased price of factory butter The increased price of factory batter led to a larger production in 1910 than in 1900, and this was made especially in Quebec at the cost of a lower production of cheese. The change was lurther induced by the lower rate of duty on cream in the United States; which encouraged larger exports to that coun-

try.
The number of condease! milk factor-The number of confident mix factories in operation increased from four in 1900 to twelve in 1910, and the value of products increased from \$47,520 to \$1,839,871. There are now six factories in Ontario, with a product of \$1,545,689, two in Nova Scotia with \$133,956, two in Onelies with \$73,900, one in British Co-Quebec with \$275,000, one in British Columbia with \$44,956 and one in Prince Edward Island with \$50,900. In 1903 there were two factories in Nova Scotia and one each in Prince Edward Island and Ontario. Archibald Blue, chief officer Census and Statistics Office, April,

MOUNT TEMPLE

Did Its Best to Help Titanic in Distress.

St. John, N. B., Auril 29. - The rumor that the steamer Mount Temple was within five miles of the Titanic when she sank, and without heeding signals of distress steamed away, leaving 1,600 souls to perish, is once more indignantly denied by Captain Moore, who was in command of the vessel. His statement is as follows:--

"We received a wireless message after midnight Sunday from the Titanic stating that she had struck an iceberg and to come at once. We turned about at 12.30 o'clock and steamed back to the position given us, arriving there at 4.30 o'clock. We us, arriving there at 4.30 o clock. We encountered so much ice, however, that we stopped until daylight. We cruised about, but could not see any sign of the ship. About 6 a. m. on the other ship of an immense field of ice studded thickly with bergs we saw the Carpathia. We also saw the saw the Carpathia. We also saw the Californian, which was to the northward of us, steaming west, then com ing down to southward, and she met us. She did not communicate any-thing. At 8.46 o'clock (ship's time) we received a general message that the Carpathia had picked up twenty sistance, but got no reply. Shortly after we received another general message, stating: 'Nothing more can be done; no need to stand by.' We then left the scene and proceded

Captain Moore said that as soon as he turned about he called all hands on deck and immediately put them to work getting boats ready to be lowered, allotting ropes and accom-modation indders in readiness for service. He placed men in crews and had one sailor hoisted to the very top of the mast, instructing him to keep a sharp lookout.

When he turned his ship and rush ed back among the immense fields of ice he was doing so at a great risk, for he had on board 1,461 passengers besides his crew. Nevertheless he promptly answered the call for help. Captain Moore said that when he turned away from the scene to continue on his course the steamers Carpathia, Californian, Birma, Frank-furt and a tramp were in the vicin-ity, "Furthermore," he said, "what is active and rates are tirm.

Vancouver and Victoria reports say a brisk trade is maxing at these points and throughout the province. Values of commodities are generally sterrly to firm.
