London, Thursday, August 1.

PROGRESS OF THE OIL, SALT, CLAY, AND OTHER WESTERN ONTARIO MINING

INDUSTRIES.

The annual report of the Director of the Ontario Mining Bureau is about as interesting a volume as is issued by Government in this country, Mr. Blue has the faculty of putting his facts plainly, of marshalling them in a simple, effective manner, and of bringing the information up to date. To all who are either directly or indirectly interested in mining in this country this report will be most valuable. Take our own Western Ontario industries, for example, we find full details as to the nickel, gold, silver, copper, cobalt, petroleum and other products of the earth. The value of the oil product from the Petrolea region last year is given as follows:

Quantity. Illuminating oil, gal. 14,349,472 \$1,337,040 242,688 Lubricating oil, gal. 3,817,181 All other oils, gal. 10,632,141 Paraffine wax, lbs... 2,754,300 343,416 152,467 Fuel product.... ..

The total value of distilled product Increased from \$1,400,435 in 1892 to \$2,-146,937 last year. Improved methods of refining resulted in a gain of all oils extracted from the crude in 1894, as compared with 1892, of 4.10 per cent, and in illuminating oil alone 2.43 per cent. The Director expects good results to flow from the use of the new method for extracting crude petroleum.

Though the number of gas wells increased from 107 to 110 during last year, Mr. Blue shows that there is a decrease in the year of gas products from M 2,342,000 cubic feet to 1,653,500 M cubic feet. The total decrease is thus 688,500,000 cubic feet. The chief places benefitted by the natural gas industry are Detroit and Buffalo, whose citizens enjoy the cheap and clean fuel and light. Formerly these offies drew their supply from the Ohio and Pennsylvanta fields, but these in time became so far depleted that the supplies are cut off. To reach Detroit from the gas field on the shore of Lake Erie piping 35 miles in length has been laid down. It is not expected that the natural gas supply here will hold out for many years, though no doubt well-owners will hope for a different result. Already the pressure of the Welland wells has fallen very much owing to the quantity sent to Buffalo, and the erection of a pumping station has been necessitated to maintain the flow.

Another industry in which we in the West are interested is that of the production of salt. The Director points out that the salt area was at first supposed to be confined to portions of the counties of Huron and Bruce, but borings made during recent years have shown that it extends into parts of Middlesex, Lambton, Essex and Kent. It appears likely indeed that the thickest beds are in the last named county, but they are at a much greater depth than elsewhere. A well bored two years ago at Windsor, in Essex, struck a very good deposit, and a large quantity of salt was produced last year at the works erected there. In Huron and Bruce the industry was less active than in former years, and the total product of the Province was less than in any year since 1891. In the latter year the product was 44,167 tons, valued at \$157,000; in 1892, it was 43,387 tons; in 1893, it was 48,450 tons; while last year it was only 35,215 tons, valued at \$115,-

Mr. Blue makes some pertinent referonces to the clay industry of the Proince. He points out that we have the necessary raw material to put on the market all the Portland cement that this country requires, and that, too, of first-rate quality; and he remarks on the importance of the clay industry, thich now markets one-fourth of the egate value of all the mineral proin the Province. Common and pottery to the value of \$1,produced last year, the ving employment to 2,800 ginning in the production k in this Province. Many nakers of paving brick. clay mixtures which ilts, as well as the

> heat to produce a impervious brick. Portland cement marls and clay to which it is required and paving brick s to cover the conindependent as we ying ourselves with

the materials of such everyday requirements as are called for in the building of good roads." Recently, the Director states, a course of practical and scientific instruction in the art of clay-making and crematics has been added to the educational work of the Ohio State University, and he suggests that the professors in our scientific schools should at once prepare to enter upon similar work.

The depression in trade has adversely affected mining as well as every other industry, and has tightened the purse strings of capitalists who, under ordinary circumstances, might have aided in the development of the great natural resources in our new territories which Sir Oliver Mowat so pluckily fought to retain for the advantage of the Province of Ontario. But the Director is optimistic as to the future, and we join him in the hope that many of our own capitalists may be added to those of Europe and of the United States in intelligent development of our mining industries. We have iron, silver, copper, gold and other minerals in greater or less abundance. We have the means for producing calcium carbide, from which acetylene, that wonderful product, is obtained. All that is needed is the intelligent investment of capital. The circulation of Mr. Blue's report should have a powerful effect in inducing that investment.

### POINTS.

The Toronto men who thought to usurp London's municipal management have been taught a lesson by the court to which they appealed.

If Holmes is to be passed around for punishment Canada respectfully asks to have the first chance.—Chicago Re-If Canada gets the first chance, it

will be Holmes' last chance. Asphalt pavement laying can no longer be delayed. Those men who thought

to block the early completion of the work because they could not get their way have made nothing by their opposition. Now let the laying go on, and let every precaution be taken to insure a good job.

Russia is said to be secretly helping the Macedonians, wno are in rebellion against Turkish rule. The Czar has heard the cry, "Come over and help us:" but judging by past experience, if he is really responding he means to go over and help himself. Russia is ever

London is becoming increasingly popular as a summer resort. With our healthful surroundings and splendid drinking water there is no reason why we should not have many additional visitors. This is a splendid pleasure and health center, as well as a most advantageous city in which to buy.

The Winnipeg Free Press rightly argues that no Government in Manitoba can take action to improve its school law, so as to do full justice to the minority, until such time as the Dominion Administration unconditionally withdraws its foolish remedial order. The sending of that ultimatum was worse than a blunder.

Detroit business men, in a petition to the Chamber of Commerce, pay a well merited tribute to the efficiency of the Canadian trunk lines. Detroiters now receive the bulk of their letters from New York, Boston, Philadelphia and other important business points by way of Toledo. They want the mails to be carried through Canada, to be sorted on the way, and by this means six hours will be saved on each delivery. The Canadian route is the swiftest for mails, as it is the safest and most attractive for through passengers. The Detroiters will get their way. They are hard to resist when they are united in favor of a public improvement.

"Canada's shame," says the Toronto Star, "is complete with Sir Adolphe discharging the duties of Premier." Our contemporary can get rid of its share of the responsibility for this condition of affairs by henceforth aiding in the movement to have Sir Adolphe Caron and his associates removed from office. A change would be healthy.

Another north pole expedition may be expected as the result of the International Geographical Congress. The Dominion Government has inaugurated the movement by bonusing the Hud-

Politically, Britain is the most fickle country in the world. With a regularity almost like clockwork the electors there vote that no political party shall to the matter. have more than one term of office.

It is now said that President Cleveland will not be a candidate for a third term. In this he exhibits his wisdom. Though there may be no sweeping reason in favor of the custom, no political party in the United States has ever nominated a President for a third term. Grant was put up, but his friends failed to secure a sufficient majority in the

NIGHTMARE AT GODERICH. There is an animal owned in town that makes night hideous. On Sunday night and Monday morning it bellowed on and off for three nours, and as its location was the square, its bellowing was evenly distributed.—Goderich Sig-

FUN IN BRITISH POLITICS. If we are to believe the cable correspondents there was little humor in the

recent political campaign in Great Britain. Rider Haggard's tempestuous boohooing because the rustics of Norfolk chivied him and his swell turnout is ridiculed. It was expected that a man of his experience would be able to take a beating with a decent grace. Some of the parsons were amusing in a way, cables one correspondent, notably one who issued a circular that Lord Rosebery's influenza was a direct sign that God disapproved of the Welsh Church disestablishment, but with them, too, people were too annoyed to laugh. Glum Fifeshire furnishes the nearest approach to a good joke. The Tory candidate on the last day placarded the walls with "Vote for Wilson and Save the Church." Within an hour the Radicals nad rival posters everywhere, "Vote for Ferguson and Let the Church Save Us." Ferguson and his sharp repartee triumphed.

A 96-COLUMN WEEKLY.

The Western Advertiser (our weekly edition) is issued today. It is now a mammoth journal of the week's doings, chronicled in 96 columns. Not an inch of the sixteen large pages is wasted. Every important item received, either by cablegram, by telegraph, or from special correspondents, up to the hour of going to press is given; there is an exciting continued story by & well-known author, and the best of selections from standard literature. Many thousands of homes throughout the country, more particularly in the region of which London is the center, are each recurring week made glad by its appearance.

PROSPERITY WITHOUT DUTIES. The price of wool is increasing, but not by the aid of bounties, protection and artificial nourishment. The increase is based on the industrial demand, from new woolen mills in all parts of the country. That is the Democratic tariff policy, which creates a better demand and a higher price for raw materials by taking off the duty.+ Chicago Chronicle.

JAPS STILL IN IT.

In the high schools of Japan the English language is placed on the same footing as the Japanese, and its study is compulsory. The Japs are as good at looking after the future as they are in keeping up to date in current affairs. -St. Louis Globe-Democrat.

Prof. Goldwin Smith, in "Guesses at the Problem of Existence" in the August number of the North American, Review treats exhaustively the theories set forth in the works of Mr. Bal-four, Mr. Drummond and Mr. Kidd.

In the August number of the North American Review the Rev. Dr. H. Pereira Mendes, the well known Jewish preacher, discusses "The Solution of War." The restoration of Palestine to the Hebrew people, and the establishment there of an international court of arbitration would, Dr. Mendes thinks, result in a general disarma-ment of the nations of the earth.

### TWO MISERABLES.

The Statement of Guthier, Who Killed His Sweetheart.

Montreal, July 31.-Isate Guthier, the cigar maker who shot five times at his sweetheart, Corinne Consigny, and killed her yesterday, made a statement today to the effect that he and his girl had decided to die, and that he was to kill her first and himself afterwards. "We were two miserables," said the prisoner afterwards. "I was suffering of consumption and she of some terrible incurable disease. The cure to whom we went to get married refused to marry us on that account, and, as loved one another madly, we decided to die. In my excitement, however, emptied the revolver, and no bullets were left for me; therefore I live. I am ready to die, however, and the sooner the better. My lungs are gone, and I probably will not live over a week under any circumstances."

A DOG WITH A BAD NAME. Isaac Danford Will Be Sentenced for a Crime Committed Seven Years

(Chatham Banner, July 27.) On April 18, 1888, Isaac Danford, then of Chatham township, stole some beef.

He was tried and let out on suspended On Saturday last he was again tried for stealing pork from one Kyle. Danford was supposed to have sent some ladies to Kyle's house to get some pork, which he said was his. The ladies took it, and next day a constable arrested Danford, as the pork was taken to his house. On trial Danford denied any connection with the crime, and said that the women brought the pork to his house without his knowledge. There was not sufficient evidence to convict him, although the judge had no doubt the man was guilty. In trying Dan-ford's accomplices evidence came out

which proved this beyond a doubt. As Danford could not be tried again on the same charge, the suspended sentence was thought of, and a search through old papers in the archives of the police court this morning revealed the document, seven years old. A warrant for Danford's arrest has been issued and the police are after him now An interesting fact in connection with people let out on suspended sentence appears in this case. It is only about once in 100 times that a man returns to have the sentence lifted. Anyone could do so by serving one hour in the cells. or putting in some such time at the jail. Had Denford done this seven years ago he would now be a free man. He, like all the rest, thought he would never get into trouble again, so did not attend
